Notice of approval

1. The Health and Safety Commission has on 16 April 2002 approved the publication of this document, *Information approved for the classification and labelling of substances and preparations dangerous for supply* ('Approved Supply List (Seventh edition)') for the purposes of the Chemicals (Hazard Information and Packaging for Supply) Regulations 2002 ('CHIP 3').
2. This Approved Supply List (Seventh edition) shall have effect from the date on which CHIP 3 comes into force.
3. On that date the Approved Supply List (Sixth edition) (approved by the Health and Safety Commission on 15 August 2000 for the purposes of the Chemicals (Hazard Information and Packaging for Supply) Regulations 1994 shall cease to have effect except insofar as is required by regulation 16 of CHIP 3.

Signed

Mark Dempsey

Secretary to the Health and Safety Commission

[15 May 2002]

Preface

This Approved Supply List (Seventh edition) is based on Annex I to the Dangerous Substances Directive (67/548/EEC) as adapted to technical progress. It incorporates all adaptations up to the 28th¹ and supersedes the Approved Supply List (Sixth edition).

The Chemicals (Hazard Information and Packaging for Supply) Regulations 2002 (CHIP 3) impose requirements by reference to this List and to that extent it is legally binding.

The Approved Supply List (Seventh edition) is one of three documents supporting CHIP 3. The other two are: the Approved Classification and Labelling Guide and the Approved Code of Practice: The compilation of safety data sheets.

¹ Commission Directive 2001/59/EC (OJ L 225, 21.8.2001, p.1).

Introduction

Purpose of the Approved Supply List

1 The *Approved Supply List* (ASL or 'the List' for short), is an integral part of the Chemicals (Hazard Information and Packaging for Supply) Regulations 2002 (CHIP). The Regulations define the system for classification and labelling of substances and preparations dangerous for supply. This system applies to all dangerous substances and preparations as defined in the Regulations and is based on Directives agreed by member states of the European Union - principally the Dangerous Substances Directive (67/548/EEC) and the Dangerous Preparations Directive (1999/45/EC), both as amended and adapted to technical progress.

2 The ASL has been approved by the Health and Safety Commission and contains detailed information about substances to assist manufacturers, importers and suppliers having responsibilities under CHIP. For the purposes of classification and labelling, this comprises:

- (a) information to be shown on labels when the substance is supplied in packages; and
- (b) information to be used to derive the classification and supply labels for preparations containing the substance.

3 Inclusion of a substance in the ASL normally indicates that the substance is dangerous for supply. However, some complex substances may have a partial or qualified entry, meaning that the substance as supplied may not actually need to be labelled as dangerous. Great care should be taken in interpreting these entries (see paragraphs 27 to 31 for further details). On the other hand, the absence of a substance from the List does not imply that the substance is 'safe'. In this case the person supplying the substance should assess the hazards and assign, as necessary, a classification and label in accordance with CHIP and the criteria in the Approved guide to the classification and labelling of substances and preparations dangerous for supply.

4 It is important to note that there is a difference between hazard (ie the inherent properties of a chemical) and risk (ie the probability of the hazardous properties of the chemical causing harm to people or the environment). The ASL provides information about the hazards of certain substances, not the risk.

5 Classification of a substance or preparation is important not only to derive the label for any package in which the substance is supplied, but also as a source of information in relation to control measures for handling, use or storage, for example, under the Control of Substances Hazardous to Health Regulations 1999 (COSHH). The listing of any particular substance in the ASL however, does not prejudice application of any prohibitions, controls, or special conditions laid down in any Act or regulation relating to that substance.

Structure of the Approved Supply List

6 The ASL is derived directly from Annex I to the Dangerous Substances Directive. Annex I is a list of dangerous substances for which harmonised classification and labelling have been agreed at Community level in accordance with the procedure laid down in the Directive

and which is updated from time to time by way of Adaptation to Technical Progress (ATP). This new edition of the ASL covers all ATPs up to the 28th.

7 This edition of the ASL continues the arrangement introduced in the 4th edition of a single alphabetical listing which makes finding the entry for a substance a one-step operation. There are five parts to the ASL:

- Part I contains, and lists in alphabetical order of name, entries for all the substances covered;
- Part II reproduces the EINECS and other descriptions of certain substances to help identification in difficult cases;
- Part III gives the names of all the substances covered by those entries which are applicable to mixtures of named substances or mixtures/specific isomers;
- Part IV gives information for classification of pesticides; and
- Part V summarises key information for users of the List

8 In the course of producing a new edition of the ASL the opportunity may be taken to correct typographical errors in earlier editions and as a result the entries for some substances may differ from those in the previous edition. Users should carefully check the entry for each substance of interest to them and ensure that they are using the correct information.

9 The addition of new entries, or amendments to existing entries, in Annex I to the Dangerous Substances Directive is effected by referral of the necessary data to a Working Group of National Experts established under the Directive and chaired by representatives of the European commission. Any person seeking to add or amend Annex I entries should contact the Health and Safety Executive, Health Directorate, Chemical Supply Management Unit, Rose Court, 2 Southwark Bridge, London SE1 9HS (telephone number: 0207-717 6000) to discuss the necessary data and procedure. More information on CHIP and its underlying EC Directives, including news on recent developments, may be found at: www.hse.gov.uk/lthdir/noframes/chip/chipo.htm

How to use the Approved Supply List

10 This paragraph explains how to use the ASL to find out about the approved classification and labelling requirements for particular substances.

- (a) First, turn to part I of the List and look for the entry for the substance of interest. The entries are arranged in alphabetical order of substance name. If you are looking for one of the complex coal or oil derived substances you will need to look under 'c' (for coal tar products) or 'p' (for petroleum substances); you may also need to refer to Part II (EINECS and other descriptions) to identify the correct entry.

- (b) Once you have found the entry read off the substance classification (see paragraph 22(a)) label (see paragraph 22(b)) and concentration limit (see paragraph 22(c)) information as required, taking into account any notes accompanying the entry (see also paragraphs 25 and 26). Refer to Part V and read off the full text of the risk and safety phrases as required.
- (c) Below the entry name you may see other names in smaller type. These will be either one or both of the following: alternative names for the substance (see, for example, the entries for ethanol and ethyl alcohol), or the names of other substances with the same classification (see, for example, the entries for dimethylzinc and diethylzinc). Each of these other names will have an ASL entry corresponding to it.
- (d) You need to remember that in any ASL entry where more than one substance name appears the CAS number and the EC number given are for the substance whose name appears first in that entry. For example, the EC number for dimethylzinc is 208-8841 whereas that for diethylzinc is 209-161-3. (The CAS number is the number assigned by the Chemicals Abstracts Service and is included for information only. For the significance of EC number, see paragraph 22(b).)
- (e) For entries which cover more than one named isomer, a cross reference to Part III is given in brackets after the Index number (this number is given for information only - see paragraph 11 for an explanation of it). In these cases Part III can be used to identify the range of chemicals covered by the entry (see also paragraph 13 and Note C in paragraph 25).

Changes since the previous edition. A code is used to highlight changes to entries since the previous edition of the ASL. Where the name of the substance is preceded by a '•' symbol this indicates a new entry to the list. Where the name of the substance is preceded by a '■' symbol the entry has been revised for scientific reasons since the previous edition. Where neither of these symbols appears either the entry is identical to that in the previous edition or if it is not identical it is solely due to correction of typographical errors.

Index number

11 Part I of the ASL is derived from Annex I to the Dangerous Substances Directive. These have essentially the same content but they are organised differently: in Annex I the substance entries are listed in order of *Index number* but in Part I they are in alphabetical order of substance name. However, the entries in the ASL do give the relevant Index number and the derivation of this number is set out below.

The Index number for a substance is in the form of a digit sequence ABC-RST-VW-Y, where:

- ABC is either the atomic number of the chemical element most characteristic of the substance's properties (preceded by one or two zeros to make up the sequence), or the class number for organic substances as shown in Table 1;
- RST is the consecutive number of the substance in the series ABC;

- VW denotes the form in which the substance is produced or placed on the market; and
- Y is the checkdigit calculated in accordance with the ISBN (International Standard Book Number) method.

As an example, the Index number for sodium chlorate is 017-005-00-9.

Table 1 Index number classes for organic substances

601	Hydrocarbons
602	Halogenated hydrocarbons
603	Alcohols and derivatives
604	Phenols and derivatives
605	Aldehydes and derivatives
606	Ketones and derivatives
607	Organic acids and derivatives
608	Nitriles
609	Nitro compounds
610	Chloronitro compounds
611	Azoxy and azo compounds
612	Amine compounds
613	Heterocyclic bases and derivatives
614	Glucosides and alkaloids
615	Cyanates and isocyanates
616	Amides and derivatives
617	Organic peroxides
618	Miscellaneous substances
647	Enzymes
648	Complex substances derived from coal
649	Complex substances derived from petroleum
650	Miscellaneous substances

12 Index numbers sometimes refer to generic entries. Examples are:

013-004-0G2 aluminium alkyls;
 080404-00-7 mercury, organic compounds except those elsewhere specified;
 612-009-00-2 aniline, salts of.

13 In some cases, however, the Index number refers to a mixture of named substances or to specific isomers and a mixture of isomers. Such entries are identified by a cross reference to part III placed after the Index number in Part I, indicating that the full description of the Index number in Part III should be checked. Examples are:

601-006-00-1 (see Part III)	pentane; isopentane
607-024-006 (see Part III)	propyl acetate;
	isopropyl acetate
615-006-00-4 (see Part III)	toluene-2,edi-isocyanate;
	toluene-2,6di-isocyanate.

(See also paragraph 10 and Note C in paragraph 25).

Conventions for alphabetical listing (Part 1 of the List)

- 14** The substances entries in Part I of the ASL are listed in alphabetical order of substance name subject to the conventions set out below:
- (a) The following prefixes determine a position in the list:

bi, bis, cyclo, epi, iso, neo, per, tris;
mono, di, tri, tetra, penta, hexa or other Greek prefixes denoting number;
ortho, meta and para where these form part of the name.

- (b) The following prefixes are ignored:

Arabic numerals such as 1, 2, or 3;
 α , β , γ or other Greek letters;

other prefixes such as:

o , m or p denoting ortho, meta or para;
 n , sec or $tert$ denoting normal, secondary or tertiary;
 N denoting attached to nitrogen;
 O denoting attached to oxygen;
 S denoting attached to sulphur.

As examples, look under:

't' for 1,1,1-trichloroethane
'c' for achlorotoluene
'h' for n-hexane
'd' for NNdiethylaniline.

- (c) The spelling 'sulphur' is used throughout the List. The spelling 'sulfur' is equally acceptable where the convention demands this form.

Nomenclature

15 Wherever possible dangerous substances are designated by their EINECS, ELINCS or 'No-longer-polymer' names. Other substances not listed in EINECS, ELINCS or the list of 'No-longer-polymers' are designated using an internationally recognised chemical name (eg ISO, IUPAC). An additional common name is included in some cases. Impurities, additives and minor components are normally not mentioned unless they contribute significantly to the classification of the substance.

16 Some substances are described as a mixture of A and B. These entries refer to one specific mixture. In some cases where it is necessary to characterise the substance supplied, the proportions of the main substances in the mixture are specified.

17 Some substances are described with a specific percentage purity. Substances containing a higher content of active material (eg an organic peroxide) are not included in the ASL entry and may have other hazardous properties (eg explosive). Where specific concentration limits are shown, these apply to the substance or substances shown in the entry. In particular, in the case of entries which are mixtures of substances or substances described with a specific percentage purity, the limits apply to the substance as described in the ASL and not the pure substance.

18 Regulation 9(2)(b)(i) of CHIP requires that for substances appearing in the ASL, the name of the substance to be used on the label should be one of the designations given in the ASL. In this context Notes A to D in paragraph 25 provide a qualification to the names given in Parts I and III. For some substances additional information has been provided for users to enable them to better identify particular substances in generic entries. These are indicated by (name) after the generic entry.

19 For certain substances additional information has been added in Part II in order to help identify them. In the case of oil and coal derived substances the full EINECS description is given. In the case of refractory ceramic fibres, mineral wools and special purpose fibres a description based on chemical composition is given. This information need not be included on the label.

20 Certain entries contain a reference to impurities. An example is 'methyl acrylamidomethoxyacetate (containing $\geq 0.1\%$ acrylamide)' (Index No. 607-19-00-X). In these cases the reference in brackets forms part of the name, and must be included on the label.

21 Certain entries refer to groups of substances. An example is 'hydrogen cyanide, salts of (with the exception of complex cyanides such as ferrocyanides, ferricyanides and mercuric oxycyanide'. For individual substances covered by these entries, the EINECS name or another internationally recognised name must be used.

Substance Information in the ASL

22 The following information is given for each substance assigned a classification and label in Part I (see the sample entry in Part V):

- (a) the classification which identifies the hazards of the substance in each category of danger. The classification for each category of danger is normally presented in the form of an expression representing the category of danger together with the appropriate risk phrase (+ eg 'Xn: R22'). However, in some cases the risk phrase(s) alone is used, eg 'R43'. Additionally, in order to avoid confusion with acute or chronic health hazards special abbreviations are used for the categories of danger carcinogenic, mutagenic or toxic for reproduction. Table 2 sets out for each category of danger its abbreviation or the abbreviation for the corresponding risk phrase(s) in those cases where only the risk phrase(s) appears.

Table 2 Abbreviations for categories of danger

Explosive	E
Oxidising	O
Extremely flammable	F+
Highly flammable	F
Flammable	R10
Very toxic	T+
Toxic	T
Harmful	Xn
Corrosive	C
Irritant	Xi
Sensitising	R42 or R43 or R42/43
Carcinogenic	Carc Cat 1 or Carc Cat 2 or Carc Cat 3
Mutagenic	Muta Cat 1 or Muta Cat 2 or Muta Cat 3
Toxic for reproduction	Repr Cat 1 or Repr Cat 2 or Repr Cat 3
Dangerous for the environment	N or R52 or R53 or R52, 53 or R59

Additional risk phrases which have been assigned to describe other properties (see the sections entitled 'Other physicochemical properties' and 'Other health effects' in the *Approved guide to the classification and labelling of substances and preparations dangerous for supply*) are shown on

the same line as the classification although they are not formally part of it.

Some entries attract *Notes* (which appear after the substance name or at the beginning of the concentration limit information). It is very important that these are taken into account when classifying (see paragraphs 25 to 31);

- (b) the label, assigned to the substance, including:

the symbol(s) and indication(s) of danger that should appear on the label. The symbols are denoted by the corresponding symbol-letters as in Schedule 2 to CHIP;

the risk phrases, shown as a series of numbers preceded by the letter R indicating the nature of the special risks. The numbers are separated by either:

- (i) a comma (,) to denote separate statements concerning special risks; or
- (ii) an oblique stroke (/) to denote a combined statement, in a single sentence, of the special risks;

the safetyphrases shown as a series of numbers preceded by the letter S indicating the recommended safety precautions. Again the numbers are separated by either a comma or an oblique stroke, the significance of which is as in (b)(i) and (ii) above. (The safetyphrases in brackets are obligatory where the substance or preparation is sold to the general public.);

the ECNumber, shown as a seven digit number of the form ABC-RST-X. This number is:

- (i) for existing substances, the EINECS number (starts at 200-001-8) (OJ C 146A, 15.6.90, p.1);
- (ii) for new notified substances, the ELINCS number (starts at 400-010-9) (OJ C 139, 29.5.91, p.2); or
- (iii) for 'no-longer-polymers' the 'No-longer-polymer' number (starts at 500-0014) (ISBN 92-827-89954).

For substances in the ASL, regulation 9(2)(c)(iv) of CHIP requires the package label to include any EC number, together with the words 'EC label'. In addition the label should include all other information specified in regulation 9;

- (c) the concentration limits and associated classifications necessary to classify dangerous preparations containing the substance in accordance with Schedule 3 to CHIP. It should be noted that:

- (i) unless otherwise shown, the concentration limits are percentages by weight of the substance calculated with reference to the total weight of the preparation;
- (ii) where no concentration limits are given, the concentration limits to be used when applying the conventional method of assessing health and environmental hazards are those in Part II and Part III of Schedule 3 to CHIP;

- (iii) in certain cases, eg nitric acid, hydrogen peroxide and perchloric acid, the concentration limits in Part I also denote the concentration at which the substance itself has the physicochemical property oxidising.

Groups of substances

23 Where group entries such as '... compounds of ...' or '... salts of ...' are used they will apply to all substances covered by the description which are listed in EINECS, ELINCS or the list of 'No-longer-polymers'. Where a substance is covered by two or more group entries (eg lead oxalate is covered by 'lead compounds ...' and by 'oxalic acid, salts of') the labelling of the substance should reflect the labelling for each of the group entries. In cases where different classifications for the same hazard are given, the classification leading to the more severe classification is used for the label of the particular substance (see section on Note A below).

24 Entries in Parts I or III for salts (under any denomination) cover both anhydrous and hydrated forms, unless expressly specified otherwise.

Meaning of the notes used in Part I of the List

25 As explained in paragraph 22(a) some entries attract notes. There are two series of these notes; an alphabetic series (Note A, Note B, etc.) which appear after the substance name and a numeric series (Note 1, Note 2, etc.) which appear above the concentration limit information. Some further advice on Notes H to Q is given in paragraphs 27 to 31. The notes are very important and their individual meanings are as follows:

Note A:

The name of the substance should appear on the label in the form of one of the designations given in Parts I or III.

In Parts I or III, use is sometimes made of a general designation such as: '...compounds' or '... salts'. In this case, the manufacturer or any other person who markets such a substance should state on the label the correct name, due account being taken of the section entitled 'Nomenclature' in this introduction.

Example: for Be Cl₂; beryllium chloride

Where the substance belongs to one group entry in Part I, the symbols, indications of danger, R- and S-phrases used for that substance are those shown in that group entry.

Where the substance belongs to more than one group entry in Part I, the symbols, indications of danger, R- and S-phrases used for that substance are those shown in both group entries. In cases where two different classifications are given in the two entries for the same hazard, the classification reflecting the more severe hazard classification is used.

Example:

Group entry 1 classification:
Repr Cat 1:R61 Repr Cat 3:R62 Xn: R20/22
R33 N:R50,53

Group entry 2 classification:
Carc Cat 1: R45 T: R23/25 N: R51.53

Substance classification:
 Carc Cat 1: R45 Repr Cat 1: R61 Repr Cat 3:
 R62 TR23/25 R33 N:R50,53

Note B:

Some substances (acids, bases, etc.) are placed on the market in aqueous solutions at various concentrations and therefore require different labelling since the hazards vary. For aqueous solutions the label shown in Part I is for the highest concentration range given under the concentration limits. For lower concentration ranges, safety phrases should be selected according to the normal rules for preparations.

In Parts I and III, a general designation of the following type is used;

'...% nitric acid'

In this case the manufacturer or any other person who markets such a substance should give on the label the percentage concentration of the solution.

Example: 45% nitric acid

Unless otherwise stated, it is assumed that the percentage concentration is calculated on a weight/weight (w/w) basis.

The use of other data (eg specific gravity, degrees Baume) or descriptive phrases (eg fuming or glacial) is permissible.

Note C

Some organic substances may be marketed either in a specific isomeric form or as a mixture of several isomers. In Parts I or III, a general designation of the following type is sometimes used:

'xylenol'

In this case the manufacturer or any other person who markets such a substance should state on the label whether the substance is a specific isomer (a) or a mixture of isomers (b).

Example: (a)2,edimethylphenol
 (b)xylenol (mixture of isomers)

(See also paragraphs 10 and 13).

Note D

Certain substances which are susceptible to spontaneous polymerisation or decomposition are generally placed on the market in a stabilised form. This is the form that is listed in Parts I and III.

However, such substances are sometimes placed on the market in a non-stabilised form. In this case, the manufacturer or any other person who places such a substance on the market should state on the label the name of the substance followed by the words 'non-stabilised'.

Example: methacrylic acid (non-stabilised)

Note E

For substances ascribed Note E the risk phrases R20, R21, R22, R23, R24, R25, R26, R27, R28, R39, R68 (harmful), R48

and R65 and all combinations of these risk phrases should be preceded by the word 'also'.

Examples: R45,23: 'May cause cancer. Also toxic by inhalation'.

R46, 27/28: 'May cause heritable genetic damage. Also very toxic in contact with skin and if swallowed'

Note F:

This substance may contain a stabiliser. If the stabiliser changes the dangerous properties of the substance, as indicated by the label in Part I, a label should be provided in accordance with the rules for the labelling of dangerous preparations.

Note G:

This substance may be marketed in an explosive form in which case it should be evaluated using the appropriate test methods and a label should be provided reflecting its explosive property.

Note H:

The classification and label shown for this substance applies only to the dangerous propert(ies) indicated by the risk phrase(s)in combination with the categor(ies)of danger shown. The requirements of regulation 4 of CHIP, on manufacturers, distributors and importers of this substance apply to all other aspects of classification and labelling. The final label shall follow the requirements of the *Approved guide to the classification and labelling of substances and preparations dangerous for supply*.

This note applies only to certain coal- and oil-derived substances and to certain entries for groups of substances in Part I.

NB The following notes J, K, L, M and P are also relevant to preparations (see paragraphs 29 and 30).

Note J:

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 0.1%w/w benzene (Einecs no 200-753-7). This note only applies to certain complex coal- and oilderived substances,

Note K:

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 0.1%w/w 1,3 butadiene (Einecs no 203-450-8). If the substance is not classified as a carcinogen, at least the S-phrases (2), 9, 16 should apply. This note only applies to certain complex oilderived substances.

Note L:

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 3% DMSO extract as measured by IP 346. This note only applies to certain complex oilderived substances.

Note M:

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 0.005% w/wbenzo[al]pyrene (Einecs no 200-028-5). This note only applies to certain complex coalderived substances.

Note N:

The classification as a carcinogen need not apply if the full refining history is known and it can be shown that the substance from which it is produced is not a carcinogen. This note only applies to certain complex oil-derived substances.

Note P:

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 0.1% w/w benzene (Einecs no 200-753-7).

When the substance is classified as a carcinogen Note E shall also apply.

When the substance is not classified as a carcinogen at least the S-phrases (2), 23, 24, 62 shall apply. This note only applies to certain complex oil-derived substances.

Note Q:

The classification as a carcinogen need not apply if it can be shown that the substance fulfils one of the following conditions:

- a short-term biopersistence test by inhalation has shown that the fibres longer than 20 µm have a weighted half life of less than 10 days; or
- a short-term biopersistence test by intratracheal instillation has shown that the fibres longer than 20 µm have a weighted halflife less than 40 days; or
- an appropriate intra-peritoneal test has shown no evidence of excess carcinogenicity; or
- absence of relevant pathogenicity or neoplastic changes in a suitable long term inhalation test.

Note R:

The classification as a carcinogen need not apply to fibres with a length weighted geometric mean diameter less than two standard geometric errors greater than 6 pm.

NoteS:

This substance may not require a label according to regulation 9 of CHIP (see the section entitled 'Special cases' in the *Approved guide to the classification and labelling of substances and preparations dangerous for supply*).

Labelling of preparations

26 The significance of the notes that appear beside the concentration limits in Part I is as follows:

Note I:

The concentration stated is the percentage by weight of the metallic element calculated with reference to the total weight of the preparation.

Note2:

The given concentration of isocyanate is the percentage by weight of the free monomer calculated with reference to the total weight of the preparation.

Note 3:

The concentration stated is the percentage by weight of chromate ions dissolved in water calculated with reference to the total weight of the preparation.

Note 4:

Preparations containing these substances have to be classified as harmful with R65 if they meet the criteria in the *Approved guide to the classification and labelling of substances and preparations dangerous for supply*.

Note 5 :

The concentration limits for gaseous preparations are expressed as volume per volume percentage.

Note 6 :

Preparations containing these substances have to be assigned R67 if they meet the criteria in the *Approved guide to the classification and labelling of substances and preparations dangerous for supply*.

This note is not relevant for preparations classified and labelled under the Chemicals (Hazard Information and Packaging for Supply) Regulations 2002. These regulations contain provisions which have the effect of addressing this property by means of a calculation method by the use of specific concentration limits.

Partial and qualified entries; Notes H to R

27 Many of the entries for complex coal and oilderived substances are partial or qualified. These can be identified by the notes which appear against the entries in Part I of the List. The notes themselves are listed at paragraph 25 of this introduction and should be read very carefully.

28 The partial entries are identified by Note H. These substances have been classified for carcinogenicity only. Suppliers of these substances must assess the substance for its other health, physicochemical and environmental effects and classify and label it accordingly. An example is 'Petroleum substance - Kerosine (petroleum)' (649-404 00-4).

29 The qualified entries can be identified by Notes J to P. These mean that the classification and labelling requirements shown in Part I will only apply if the complex substance meets the conditions set out in the relevant note. Note J, for example, states that the carcinogenicity classification and label apply only if the substance contains 0.1% or more benzene as a constituent. Benzene, in this case, acts a marker. If the substance, as supplied, contains less than 0.1%benzene then it is not required to be classified and labelled as a carcinogen. Examples are the four entries for white spirits.

30 Notes J, K, L, M and P are also relevant to preparations which have been classified as carcinogens solely because of the presence of the relevant complex substances. If the final quantity of the appropriate marker(s) is less than that given in the note(s). then classification as a carcinogen is not required.

31 Note Qis relevant for the classification of mineral wool. Note R is relevant for the classification of mineral wool, refractory ceramic fibres and special purpose fibres.

Note on the Approved Supply List - this note does not form part of the formally approved list.

The ASL contains entries for machine-made vitreous fibres (mmvf). These substances were classified following extensive debate in the relevant EC Expert Group.

Some forms of mmvf may be classified solely on the basis of the ability of the substance to cause transient irritation of the skin. The effect seen may not be consistent with that usually observed as a result of exposure to irritant chemicals but in order to ensure a high standard of protection classification as 'irritant' is considered appropriate. This distinction may be relevant to risk assessment.

Part I Alphabetical listing, classification and
labelling information

Part I Alphabetical listing, classification and labelling information

(1 α ,5 α ,8 $\alpha\beta$,9-pentahydroxy-7 β -isopropyl-2 β ,5 β ,8 β -trimethylperhydro-8 α ,9-epoxy-5,8-ethanocyclopenta[1,2-b]indenyl) pyrrole-2-carboxylate

**Part II EINECS and other descriptions of certain
substances listed by Index number**

Part II EINECS and other descriptions of certain substances listed by Index number

Index number	EINECS description	CAS Number
648-001-00-0	A complex combination of hydrocarbons obtained by the distillation of coal tar. It consists of hydrocarbons having carbon numbers primarily in the range of C4 to C10 and distilling in the approximate range of 80°C to 160°C (175°F to 320°F).	084650-02-2
648-002-00-6	The distillate from lignite tar boiling in the range of approximately 80°C to 250°C (176°F to 482°F). Composed primarily of aliphatic and aromatic hydrocarbons and monobasic phenols.	094114-40-6
648-003-00-1	The distillate from coke oven light oil having an approximate distillation range below 100°C (212°F). Composed primarily of C4 to C6 aliphatic hydrocarbons.	065996-88-5
648-004-00-7	A residue from the distillation of crude benzole to remove benzole fronts. Composed primarily of benzene, toluene and xylenes boiling in the range of approximately 75°C to 200°C (167°F to 392°F).	101896-26-8
648-009-00-4	The residue remaining from the distillation of recovered naphtha. Composed primarily of naphthalene and condensation products of indene and styrene.	090641-12-6
648-012-00-0	A complex combination of hydrocarbons obtained from the evaporation of solvent under vacuum from polymerised hydrocarbon resin. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C8 through C9 and boiling in the range of approximately 120°C to 215°C (248°F to 419°F).	091995-20-9
648-014-00-1	The redistillate from the distillate, freed of tar acids and tar bases, from bituminous coal high temperature tar boiling in the approximate range of 90°C to 160°C (194°F to 320°F). It consists predominately of benzene, toluene and xylenes.	091995-61-8
648-015-00-7	A complex combination of hydrocarbons obtained by the redistillation of the distillate of high temperature coal tar (tar acid and tar base free). It consists predominately of unsubstituted and substituted mononuclear aromatic hydrocarbons boiling in the range 85°C -195°C (185°F -383°F).	101316-63-6
648-016-00-2	An acid sludge by-product of the sulphuric acid refining of crude high temperature coal. Composed primarily of sulphuric acid and organic compounds.	093821-38-6
648-017-00-8	The first fraction from the distillation of aromatic hydrocarbons, coumarone, naphthalene and indene rich prefractionator bottoms or washed carbolic oil boiling substantially below 145°C (293°F). Composed primarily of C7 and C8 aliphatic and aromatic hydrocarbons.	090641-02-4
648-019-00-9	The distillate from aromatic hydrocarbons, coumarone, naphthalene and indene rich prefractionator bottoms or washed carbolic oils, having an approximate boiling range of 155°C to 180°C (311°F to 356°F). Composed primarily of indene, indan and trimethylbenzenes.	090641-03-5
648-020-00-4	The distillate from either high temperature coal tar, coke oven light oil, or coal tar oil alkaline extract residue having an approximate distillation range of 130°C to 210°C (266°F to 410°F). Composed primarily of indene and polycyclic ring systems containing a single aromatic ring. May contain phenolic compounds and aromatic nitrogen bases.	065996-79-4
648-021-00-X	A distillate from the fractional distillation of high temperature coal tar. Composed primarily of alkyl-substituted one ring aromatic hydrocarbons boiling in the range of approximately 135°C to 210°C (275°F to 410°F). May also include unsaturated hydrocarbons such as indene and coumarone.	101794-90-5

Index number	EINECS description	CAS Number
648-022-00-5	This oil is a complex mixture of aromatic hydrocarbons, primarily indene, naphthalene, coumarone, phenol and o-, m-, and p- cresol and boiling in the range 140°C to 215°C (284°F to 419°F).	090640-87-2
648-023-00-0	A complex combination of hydrocarbons obtained by the distillation of coal tar. It consists of aromatic and other hydrocarbons, phenolic compounds and aromatic nitrogen compounds and distills at the approximate range of 150°C to 210°C (302°F to 410°F).	084650-03-3
648-024-00-6	The distillate from high temperature coal tar having an approximate distillation range of 130°C to 250°C (266°F to 410°F). Composed primarily of naphthalene, alkyl naphthalenes, phenolic compounds, and aromatic nitrogen bases.	065996-82-9
648-026-00-7	The oil resulting from the acid washing of alkali-washed carbolic oil to remove the minor amounts of basic compounds (tar bases). Composed primarily of indene, indan and alkyl benzene.	090641-01-3
648-027-00-2	The residue obtained from coal tar oil by an alkaline wash such as aqueous sodium hydroxide after the removal of crude coal tar acids. Composed primarily of naphthalenes and aromatic nitrogen bases.	065996-87-4
648-028-00-8	The aqueous extract produced by an acidic wash of alkali-washed carbolic oil. Composed primarily of acid salts of various aromatic nitrogen bases including pyridine, quinoline and their alkyl derivates.	090640-99-6
648-029-00-3	The complex combination of polyalkylated pyridines derived from coal tar distillation or as high boiling distillates approximately above 150°C (302°F) from the reaction of ammonia with acetaldehyde, formaldehyde, or paraformaldehyde.	068391-11-7
648-030-00-9	Pyridine bases boiling in the range of approximately 125°C to 160°C (257°F to 320°F) obtained by distillation of neutralized acid extract of the base-containing tar fraction obtained by the distillation of bituminous coal tars. Composed chiefly of lutidines and picolines.	092062-33-4
648-032-00-X	The extract produced by the acidic extraction of bases from crude coal tar aromatic oils, neutralization, and distillation of the bases. Composed primarily of collidines, aniline, toluidines, lutidines and xylylides.	068937-63-3
648-033-00-5	The distillation fraction boiling in the range of approximately 181°C to 186°C (356°F to 367°F) from the crude bases obtained from the neutralized, acid-extracted base-containing tar fractions obtained by the distillation of bituminous coal tar. It contains chiefly aniline and colhdines.	092062-28-7
648-034-00-0	The distillation fraction boiling in the range of approximately 180°C to 200°C (356°F to 392°F) from the crude bases obtained by dephenolating and debasing the carbolated oil from the distillation of coal tar. It contains chiefly aniline, collidines, lutidines and toluidines.	092062-27-6
648-036-00-1	A complex combination of hydrocarbons obtained as a redistillate from the fractional distillation of bituminous coal high temperature tar and residual oils that are obtained by the pyrolytic production of alkenes and alkynes from petroleum products or natural gas. It consists predominately of indene and boils in a range of approximately 160°C to 190°C (320°F to 374°F).	091995-31-2
648-037-00-7	The redistillate obtained from the fractional distillation of bituminous coal high temperature tar and pyrolysis residual oils and boiling in the range of approximately 190°C to 270°C (374°F to 518°F). Composed primarily of substituted dinuclear aromatics.	091995-35-6

Index number	EINECS description	CAS Number
648-038-00-2	The redistillate from the fractional distillation of dephenolated and debased methylnaphthalene oil obtained from bituminous coal high temperature tar and pyrolysis residual oils boiling in the approximate range of 220°C to 230°C (428°F to 446°F). It consists predominantly of unsubstituted and substituted dinuclear aromatic hydrocarbons.	091995-66-3
648-039-00-8	A neutral oil obtained by debasing and dephenolating the oil obtained from the distillation of high temperature tar and pyrolysis residual oils which has a boiling range of 225°C to 255°C (437°F to 491°F). Composed primarily of substituted dinuclear aromatic hydrocarbons.	122070-79-5
648-040-00-3	Residue from the distillation of dephenolated and debased methylnaphthalene oil (from bituminous coal tar and pyrolysis residual oils) with a boiling range of 240°C to 260°C (464°F to 500°F). Composed primarily of substituted dinuclear aromatic and heterocyclic hydrocarbons.	122070-80-8
648-041-00-9	A complex combination of hydrocarbons obtained as a redistillate from the distillation of wash oil. It consists predominantly of 2-ringed aromatic and heterocyclic hydrocarbons boiling in the range of approximately 260 °C to 290°C (500°F to 554°F).	101316-45-4
648-042-00-4	A complex combination of hydrocarbons obtained by the crystallization of tar oil. It consists of aromatic and polycyclic hydrocarbons primarily fluorene and some acenaphthene.	084989-11-7
648-043-00-X	The oil remaining after removal by a crystallization process of acenaphthene from acenaphthene oil from coal tar. Composed primarily of naphthalene and alkylnaphthalenes.	090640-85-0
648-044-00-5	Distillate from the fractional distillation of coal tar of bituminous coal, with boiling range of 240°C to 400°C (464°F to 752°F). Composed primarily of tri- and polynuclear hydrocarbons and heterocyclic compounds.	090640-86-1
648-045-00-0	The distillate from coal tar having an approximate distillation range of 220°C to 450°C (428°F to 842°F). Composed primarily of three to four membered condensed ring aromatic hydrocarbons and other hydrocarbons.	065996-91-0
648-046-00-6	A complex combination of hydrocarbons from the base-freed fraction obtained from the distillation of coal tar and boiling in the range of approximately 325°C to 365°C (617°F to 689°F). It contains predominantly anthracene and phenanthrene and their alkyl derivatives.	091995-14-1
648-047-00-1	The distillate from coal tar having an approximate distillation range of 100°C to 450°C (212°F to 842°F). Composed primarily of two to four membered condensed ring aromatic hydrocarbons , phenolic compounds , and aromatic nitrogen bases.	065996-92-1
648-048-00-7	The distillate from the distillation of the pitch obtained from bituminous high temperature tar. Composed primarily of tri- and polynuclear aromatic hydrocarbons and boiling in the range of approximately 300°C to 470°C (572°F to 878°F). The product may also contain heteroatoms.	091995-51-6
648-049-00-2	The oil obtained from condensation of the vapours from the heat treatment of pitch. Composed primarily of two- to four ring aromatic compounds boiling in the range of 200°C to greater than 400°C (392°F to greater than 752°F).	101316-49-8
648-050-00-8	The redistillate obtained from the fractional distillation of pitch distillate boiling in the range of approximately 350°C to 400°C (662°F to 752°F). Consists predominantly of tri- and polynuclear aromatics and heterocyclic hydrocarbons.	091995-42-5

Index number	EINECS description	CAS Number
648-051-00-3	The redistillates obtained from the fractional distillation of pitch distillate and boiling in the range of approximately 380°C to 410°C (716°F to 770°F). Composed primarily of tri- and polynuclear aromatic hydrocarbons and heterocyclic compounds.	091995-52-7
648-052-00-9	A complex combination of hydrocarbons obtained by the treatment of lignite carbonization tar with activated carbon for removal of trace constituents and impurities. It consists predominately of saturated straight and branched chain hydrocarbons having carbon numbers predominately greater than C 12.	097926-76-6
648-053-00-4	A complex combination of hydrocarbons obtained by the treatment of lignite carbonization tar with bentonite for removal of trace constituents and impurities. It consists predominately of saturated straight and branched chain hydrocarbons having carbon numbers predominately greater than C 12.	097926-77-7
648-055-00-5	The residue from the distillation of high temperature coal tar. A black solid with an approximate softening point from 30°C to 180°C (86°F to 356°F). Composed primarily of a complex mixture of three or more membered condensed ring aromatic hydrocarbons.	065996-93-2
648-056-00-0	The heat treated residue from the distillation of high temperature coal tar. A black solid with an approximate softening point from 80°C to 180°C (176°F to 356°F). Composed primarily of a complex mixture of three or more membered condensed ring aromatic hydrocarbons.	121575-60-8
648-057-00-6	The residue obtained during distillation of high boiling fractions from bituminous coal high temperature tar and/or pitch coke oil, with a softening point of 140°C to 170°C (284°F to 392°F) according to DIN 52025. Composed primarily of tri- and polynuclear aromatic compounds which also contain heteroatoms.	094114-13-3
648-058-00-1	Residue from the fractional distillation of pitch distillate boiling in the range of approximately 400°C to 470°C (752°F to 846°F). Composed primarily of polynuclear aromatic hydrocarbons, and heterocyclic compounds.	092061-94-4
648-059-00-7	Coke- and ash containing solid residues that separate on distillation and thermal treatment of bituminous coal high temperature tar in distillation installations and storage vessels. Consists predominately of carbon and contains a small quantity of hetero compounds as well as ash components.	092062-20-9
648-060-00-2	The deposit removed from crude coal tar storages. Composed primarily of coal tar and carbonaceous particulate matter.	091082-50-7
648-061-00-8	Solids formed during the coking of bituminous coal to produce crude bituminous coal high temperature tar. Composed primarily of coke and coal particles, highly aromatized compounds and mineral substances.	100684-51-3
648-062-00-3	The condensation product obtained by cooling, to approximately ambient temperature, the gas evolved in the high temperature (greater than 700°C (1292°F)) destructive distillation of coal. Composed primarily of a complex mixture of condensed ring aromatic hydrocarbons with a high solid content of coal- and coke-type materials.	068990-61-4
648-063-00-9	The combination of wastes formed by the coking of bituminous coal tar pitch. It consists predominantly of carbon.	092062-34-5
648-064-00-4	The residue from toluene extraction of dried brown coal.	091697-23-3
648-065-00-X	A complex combination of hydrocarbons obtained from lignite carbonization tar by solvent crystallization (solvent deoiling), by sweating or an adducting process. It consists predominantly of straight and branched chain saturated hydrocarbons having carbon numbers greater than C 12.	092045-71-1

Index number	EINECS description	CASNumber
648-066-00-5	A complex combination of hydrocarbons obtained from lignite carbonization tar by solvent crystallization (solvent deoiling), by sweating or an adducting process treated with hydrogen in the presence of a catalyst. It consists predominantly of straight and branched chain saturated hydrocarbons having carbon numbers predominantly greater than C12.	092045-72-2
648-067-00-0	A complex combination of hydrocarbons obtained by the treatment of lignite carbonization tar with silicic acid for removal of trace constituents and impurities. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon numbers greater predominantly than C12.	097926-78-8
648-068-00-6	Residues from fractional distillation of low temperature coal tar to remove oils that boil in a range up to approximately 300°C (572°F). Composed primarily of aromatic compounds.	101316-85-2
648-069-00-1	A complex black solid or semi-solid obtained from the distillation of low temperature coal tar. It has a softening point within the approximate range of 40°C to 180°C (104°F to 356°F). Composed primarily of a complex mixture of hydrocarbons.	090669-57-1
648-070-00-7	The product obtained by air blowing, at elevated temperature, low-temperature coal tar pitch. It has a softening point within the approximate range of 70°C to 180°C (158°F to 356°F). Composed primarily of a complex mixture of hydrocarbons.	090669-59-3
648-071-00-2	A complex black solid obtained by the heat treatment of low temperature coal tar pitch. It has a softening point within the approximate range of 50°C to 140°C (122°F to 284°F). Composed primarily of a complex mixture of aromatic compounds.	090669-58-2
648-072-00-8	The distillate from a mixture of coal and tar and aromatic petroleum streams having an approximate distillation range of 220°C to 450°C (428°F to 842°F). Composed primarily of 3- to 4-membered condensed ring aromatic hydrocarbons.	068188-48-7
648-073-00-3	A complex combination of hydrocarbons obtained from mixed coal tar pitch-polyethylene-polypropylene pyrolysis. Composed primarily of polycyclic aromatic hydrocarbons having carbon numbers predominantly in the range C20 through C28 and having a softening point of 100°C to 220°C (212°F to 428°F) according to DIN 52025.	101794-74-5
648-074-00-9	A complex combination of hydrocarbons obtained from mixed coal tar pitch-polyethylene pyrolysis. Composed primarily of polycyclic aromatic hydrocarbons having carbon numbers predominantly in the range of C20 through C28 and having a softening point of 100°C to 220°C (212°F to 428°F) according to DIN 52025.	101794-75-6
648-075-00-4	A complex combination of hydrocarbons obtained from mixed coal tar pitch-polystyrene pyrolysis. Composed primarily of polycyclic aromatic hydrocarbons having carbon numbers predominantly in the range of C20 through C28 and having a softening point of 100°C to 220°C (212°F to 428°F) according to DIN 52025.	101794-76-7
648-076-00-X	The residue from the distillation of a mixture of coal tar and aromatic petroleum streams. A solid with a softening point from 40°C to 180°C (140°F to 356°F). Composed primarily of a complex combination of three or more membered condensed aromatic hydrocarbons.	068187-57-5
648-077-00-5	Residue from the distillation of crude phenanthrene boiling in the approximate range of 340°C to 420°C (644°F to 788°F). It consists predominantly of phenanthrene, anthracene and carbazole.	122070-78-4
648-078-00-0	A complex combination of hydrocarbons obtained by the crystallization of tar oil. It consists of aromatic polycyclic hydrocarbons, primarily diphenyl, dibenzofuran and acenaphthene.	084989-10-6

Index number	EINECS description	CAS Number
648-079-00-6	A complex combination of polycyclic aromatic hydrocarbons obtained from coal tar having an approximate distillation range of 300°C to 400°C (572°F to 752°F). Composed primarily of phenanthrene, anthracene and carbazole.	090640-80-5
648-080-00-1	The residue from the fractional distillation of wash oil boiling in the approximate range of 270°C to 330°C (518°F to 626°F). It consists predominately of dinuclear aromatic and heterocyclic hydrocarbons.	092061-93-3
648-081-00-7	The by-product from the destructive distillation of coal. Almost black semisolid. A complex combination of aromatic hydrocarbons, phenolic compounds, nitrogen bases and thiophene.	008007-45-2
648-082-00-2	The condensation product obtained by cooling, to approximately ambient temperature, the gas evolved in the high temperature (greater than 700°C (1292°F)) destructive distillation of coal. A black viscous liquid denser than water. Composed primarily of a complex mixture of condensed ring aromatic hydrocarbons. May contain minor amounts of phenolic compounds and aromatic nitrogen bases.	065996-89-6
648-083-00-8	The condensation products obtained by cooling, to approximately ambient temperature, the gas evolved in low temperature (less than 700°C (1292°F)) destructive distillation of coal. A black viscous liquid denser than water. Composed primarily of condensed ring aromatic hydrocarbons, phenolic compounds, aromatic nitrogen bases and their alkyl derivatives.	065996-90-9
648-084-00-3	The complex combination of hydrocarbons obtained from prefractionation (continuous distillation) of coke oven light oil. It consists predominantly of naphthalene, coumarone and indene and boils above 148°C (298°F).	085029-51-2
648-085-00-9	A complex combination of hydrocarbons obtained by the distillation of coal tar. It consists primarily of aromatic and other hydrocarbons, phenolic compounds and aromatic nitrogen compounds and distills in the approximate range of 200°C to 250°C (392°F to 482°F).	084650-04-4
648-086-00-4	A complex combination of hydrocarbons obtained by the crystallization of naphthalene oil. Composed primarily of naphthalene, alkyl naphthalenes and phenolic compounds.	084989-09-3
648-087-00-X	A complex combination of organic compounds obtained as a filtrate from the crystallization of the naphthalene fraction from coal tar and boiling in the range of approximately 200°C to 230°C (392°F to 446°F). Contains chiefly naphthalene, thionaphthalene and alkyl naphthalenes.	091995-49-2
648-088-00-5	A complex combination of hydrocarbons obtained from the alkali washing of naphthalene oil to remove phenolic compounds (tar acids). It is composed of naphthalene and alkyl naphthalenes.	121620-47-1
648-089-00-0	A complex combination of hydrocarbons remaining after the removal of naphthalene from alkali washed naphthalene oil by a crystallization process. It is composed primarily of naphthalene and alkyl naphthalenes.	121620-48-2
648-090-00-6	The oil remaining after the removal of phenolic compounds (tar acids) from drained naphthalene oil by an alkali wash. Composed primarily of naphthalene and alkyl naphthalenes.	090640-90-7
648-091-00-1	The distillation from alkali-washed naphthalene oil having an approximate distillation range of 180°C to 220°C (356°F to 428°F). Composed primarily of naphthalene, alkylbenzenes, indene and indan.	090641-04-6
648-092-00-7	A distillate from the fractional distillation of high temperature coal tar. Composed primarily of substituted two ring aromatic hydrocarbons and aromatic nitrogen bases boiling in the range of approximately 225°C to 255°C (437°F to 491°F).	101896-27-9

Index number	EINECS description	CAS Number
648-093-00-2	A distillate from the fractional distillation of high temperature coal tar. Composed primarily of indole and methylnaphthalene boiling in the range of approximately 235°C to 255°C (455°F to 491°F).	101794-91-6
648-094-00-8	A complex combination of hydrocarbons obtained by debasing the methylnaphthalene fraction obtained by the distillation of coal tar and boiling in the range of approximately 230°C to 255°C (446°F to 491°F). Contains chiefly 1(2)-methylnaphthalene, naphthalene, dimethylnaphthalene and biphenyl.	091995-48-1
648-095-00-3	The residue from the distillation of alkali-washed naphthalene oil having an approximate distillation range of 220°C to 300°C (428°F to 572°F). Composed primarily of naphthalene, alkynaphthalenes and aromatic nitrogen bases.	090641-05-7
648-096-00-9	The extract oil boiling in the range of approximately 220°C to 265°C (428°F to 509°F) from coal tar alkaline extract residue produced by an acidic wash such as aqueous sulfuric acid after distillation to remove tar bases. Composed primarily of alkynaphthalenes.	084989-12-8
648-097-00-4	A complex combination of hydrocarbons obtained from the distillation of crude benzole (high temperature coal tar). It may be a liquid with the approximate distillation range of 150°C to 300°C (302°F to 572°F) or a semi solid or solid with a melting point up to 70°C (158°F). It is composed primarily of naphthalene and alkyl naphthalenes.	121620-46-0
648-098-00-X	A complex combination of hydrocarbons produced by the distillation of coal tar and boiling in the range of approximately 240°C to 280°C (464°F to 536°F). Composed primarily of acenaphthalene, naphthalene and alkyl naphthalene.	090640-84-9
648-099-00-5	A complex combination of hydrocarbons obtained by the distillation of coal tar. It consists primarily of aromatic hydrocarbons and may contain appreciable quantities of tar acids and tar bases. It distills at the approximate range of 200°C to 325°C (392°F to 617°F)	061789-28-4
648-100-00-9	The high boiling distillation fraction obtained from the high temperature carbonization of bituminous coal which is further refined to remove excess crystalline salts. It consists primarily of creosote oil with some of the normal polynuclear aromatic salts, which are components of coal tar distillates, removed. It is crystal free at approximately 5°C (41°F).	070321-79-8
648-101-00-4	The distillate of coal tar produced by the high temperature carbonization of bituminous coal. It consists primarily of aromatic hydrocarbons, tar acids and tar bases.	008001-58-9
648-102-00-X	A complex combination of hydrocarbons from the base-freid fraction from the distillation of coal tar, boiling in the range of approximately 250°C to 280°C (482°F to 536°F). It consists predominantly of biphenyl and isomeric diphenylnaphthalenes.	122384-77-4
648-103-00-5	The anthracene-rich solid obtained by the crystallization and centrifuging of anthracene oil. It is composed primarily of anthracene, carbazole and phenanthrene.	090640-81-6
648-104-00-0	The oil remaining after the removal, by a crystallization process, of an anthracene-rich solid (anthracene paste) from anthracene oil. It is composed primarily of two, three and four membered aromatic compounds.	090640-82-7
648-105-00-6	The residue from the fraction distillation of crude anthracene boiling in the approximate range of 340°C to 400°C (644°F to 752°F). It consists predominantly of tri- and polynuclear aromatic and heterocyclic hydrocarbons.	092061-92-2

Index number	EINECS description	CAS Number
648-106-00-1	A complex combination of hydrocarbons from the distillation of anthracene obtained by the crystallization of anthracene oil from bituminous high temperature tar and boiling in the range of 330°C to 350°C (626°F to 662°F). It contains chiefly anthracene, carbazole, and phenanthrene.	091995-15-2
648-107-00-7	A complex combination of hydrocarbons from the distillation of anthracene obtained by crystallization of anthracene oil from bituminous coal high temperature tar and boiling in the approximate range of 350°C to 360°C (662°F to 680°F). It contains chiefly anthracene, carbazole and phenanthrene.	091955-16-3
648-108-00-2	A complex combination of hydrocarbons from the distillation of anthracene obtained by crystallization of anthracene oil from bituminous light temperature tar and boiling in the range of approximately 290°C to 340°C (554°F to 644°F). It contains chiefly trinuclear aromatics and their dihydro derivatives.	091995-17-4
648-109-00-8	A distillate from low temperature coal tar. Composed primarily of hydrocarbons, phenolic compounds and aromatic nitrogen bases boiling in the range of approximately 160°C to 340°C (320°F to 644°F).	101316-87-4
648-110-00-3	The residue from low-temperature coal tar oils after an alkaline wash, such as aqueous sodium hydroxide, to remove crude coal tar acids. Composed primarily of hydrocarbons and aromatic nitrogen bases.	122384-78-5
648-111-00-9	The combination of phenols extracted, using isobutyl acetate, from the ammonia liquor condensed from the gas evolved in low-temperature (less than 700°C (1292°F) destructive distillation of coal. It consists predominantly of a mixture of monohydric and dihydric phenols.	084988-93-2
648-112-00-4	The aqueous extract from carbolic oil produced by an alkaline wash such as aqueous sodium hydroxide. Composed primarily of the alkali salts of various phenolic compounds.	090640-88-3
648-113-00-X	The extract from coal tar oil produced by an alkaline wash such as aqueous sodium hydroxide. Composed primarily of the alkali salts of various phenolic compounds.	065996-83-0
648-114-00-5	The aqueous extract from naphthalene oil produced by an alkaline wash such as aqueous sodium hydroxide. Composed primarily of the alkali salts of various phenolic compounds.	090640-89-4
648-115-00-0	The product obtained by treatment of coal tar oil alkaline extract with CO ₂ AND CaO. Composed primarily of CaCO ₃ , Ca(OH) ₂ , Na ₂ CO ₃ and other organic and inorganic impurities.	090641-06-8
648-116-00-6	The reaction product obtained by neutralizing coal tar oil alkaline extract with an acidic solution such as aqueous sulfuric acid, or gaseous carbon dioxide, to obtain the free acids. Composed primarily of tar acids such as phenol, cresols and xylenols.	065996-85-2
648-117-00-1	An acidified alkaline extract of brown coal tar distillate. Composed primarily of phenol and phenol homologs.	101316-86-3
648-118-00-7	A complex combination of organic compounds obtained from brown coal gasification. Composed primarily of C ₆ -C ₁₀ hydroxy aromatic phenols and their homologs.	092062-22-1
648-119-00-2	A residue from the distillation of crude phenol from coal. It consists predominantly of phenols having carbon numbers in the range of C ₈ through C ₁₀ with a softening point of 60°C to 80°C (140°F to 176°F).	096690-55-0
648-120-00-8	The fraction of tar acid rich in 3- and 4-methylphenol, recovered by distillation of low-temperature coal tar crude tar acids.	084989-04-8

Index number	EINECS description	CAS Number
648-121-00-3	The fraction of tar acids, recovered by distillation of low-temperature coal tar crude tar acids, having an approximate boiling range of 225°C to 320°C (437°F to 608°F). Composed primarily of polyalkylphenols.	084989-05-9
648-122-00-9	The fraction of tar acids rich in 2,4- and 2,5-dimethylphenol, recovered by the distillation of low temperature coal tar crude tar acids.	084989-06-0
648-123-00-4	The fraction of tar acids rich in 3-, and 4-ethylphenol, recovered by distillation of low-temperature coal tar crude tar acids.	084989-03-7
648-124-00-X	The fraction of tar acids rich in 3,5-dimethylphenol, recovered by distillation of low temperature coal tar acids.	084989-07-1
648-125-00-5	The residue from the distillation in the range of 235°C to 355°C (481°F to 697°F) of light carbolic oil.	068477-23-6
648-126-00-0	The residue from crude coal tar acids after the removal of phenol, cresols, xylenols and any higher boiling phenols. A black solid with a melting point approximately 80°C (176°F). Composed primarily of polyalkylphenols, resin gums, and inorganic salts.	068555-24-8
648-128-00-1	A complex combination of organic compounds obtained from brown coal and boiling in the range of approximately 200°C to 230°C (392°F to 446°F). It contains chiefly phenols and pyridine bases.	092602-26-5
648-129-00-7	The distillate from the acidification of alkaline washed lignite tar distillate boiling in the range of approximately 200°C to 230°C (392°F to 446°F). Composed primarily of m- and p- ethylphenol as well as cresols and xylenols.	094114-29-1
648-130-00-2	The aqueous extract produced by an acidic wash of alkali-washed naphthalene oil. Composed primarily of acid salts of various aromatic nitrogen bases including pyridine, quinoline and their alkyl derivatives.	090641-00-2
648-133-00-9	The distillation residue remaining after the distillation of the neutralized, acid extracted base-containing tar fractions obtained by the distillation of coal tars. It contains chiefly aniline, collidines, quinoline and quinoline derivatives and toluidines.	092062-29-8
648-134-00-4	The oil obtained from the heat treatment of polyethylene/polypropylene mixture with coal tar pitch or aromatic oils. It consists predominantly of benzene and its homologs boiling in a range of approximately 70°C to 120°C (158°F to 248°F)	100801-63-6
648-135-00-X	The oil obtained from the heat treatment of polyethylene with coal tar pitch or aromatic oils. It consists predominantly of benzene and its homologs boiling in a range of 70°C to 120°C (158°F to 248°F).	100801-65-8
648-136-00-5	The oil obtained from the heat treatment of polystyrene with coal tar pitch or aromatic oils.' It consists predominantly of benzene and its homologs boiling in a range of approximately 70°C to 210°C (158°F to 410°F).	100801-66-9
648-137-00-0	The residue obtained from chemical oil extracted after the removal of naphthalene by distillation composed primarily of two to four membered condensed ring aromatic hydrocarbons and aromatic nitrogen bases.	736665-18-6
648-138-00-6	The low-boiling distillation fraction obtained from the high temperature carbonization of bituminous coal, which is further refined to remove excess crystalline salts. It consists primarily of creosote oil with some of the normal polynuclear aromatic salts, which are components of coal tar distillate, removed. It is crystal free at approximately 38°C (100°F).	070321-80-1

Index number	EINECS description	CAS Number
648-140-00-7	The extract from coal tar oil alkaline extract residue produced by an acidic wash such as aqueous sulfuric acid after distillation to remove naphthalene. Composed primarily of the acid salts of various aromatic nitrogen bases including pyridine, quinoline, and their alkyl derivatives,	065996-86-3
648-141-00-2	The reaction product obtained by neutralizing coal tar base extract oil with an alkaline solution, such as aqueous sodium hydroxide, to obtain the free bases. Composed primarily of such organic bases as acridine, phenanthridine, pyridine, quinoline and their alkyl derivatives.	065996-84-1
648-142-00-8	A cohesive powder composed of coal mineral matter and undissolved coal remaining after extraction of coal by a liquid solvent.	094114-46-2
648-143-00-3	The product obtained by filtration of coal mineral matter and undissolved coal from coal extract solution produced by digesting coal in a liquid solvent. A black, viscous, highly complex liquid combination composed primarily of aromatic and partly hydrogenated aromatic hydrocarbons, aromatic nitrogen compounds, aromatic sulfur compounds, phenolic and other aromatic oxygen compounds and their alkyl derivatives.	094114-47-3
648-144-00-9	The substantially solvent-free product obtained by the distillation of the solvent from filtered coal extract solution produced by digesting coal in a liquid solvent. A black semi-solid, composed primarily of a complex combination of condensed-ring aromatic hydrocarbons, aromatic nitrogen compounds, aromatic sulfur compounds, phenolic compounds and other aromatic oxygen compounds, and their alkyl derivatives.	094114-48-4
648-145-00-4	An oil distilled from brown-coal tar. Composed primarily of aliphatic, naphthenic and one- to three-ring aromatic hydrocarbons, their alkyl derivatives, heteroaromatics and one- and two- ring phenols boiling in the range of approximately 150°C to 360°C (302°F to 680°F)	101316-83-0
648-146-00-X	A tar obtained from low temperature carbonization and low temperature gasification of brown coal. Composed primarily of aliphatic, naphthenic and cyclic aromatic hydrocarbons, heteroaromatic hydrocarbons and cyclic phenols.	101316-84-1
648-147-00-5	The volatile organic liquid extracted from the gas evolved in the high temperature (greater than 700°C (1292°F)) destructive distillation of coal. Composed primarily of benzene, toluene and xylenes. May contain other minor hydrocarbon constituents.	065996-78-3
648-148-00-0	The liquid product of condensation of vapors emitted during the digestion of coal in a liquid solvent and boiling in the range of approximately 30°C to 300°C (86°F to 572°F). Composed primarily of partly hydrogenated condensed-ring aromatic hydrocarbons, aromatic compounds containing nitrogen, oxygen and sulfur, and their alkyl derivatives having carbon numbers predominantly in the range of C4 through C 14.	094114-52-0
648-149-00-6	Distillate obtained by hydrocracking of coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 30°C to 300°C (86°F to 572°F). Composed primarily of aromatic, hydrogenated aromatic and naphthenic compounds, their alkyl derivatives and alkanes with carbon numbers predominantly in the range of C4 through C14. Nitrogen, sulfur and oxygen-containing aromatic and hydrogenated aromatic compounds are also present.	094114-53-1
648-150-00-1	Fraction of the distillate obtained by hydrocracking of coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 30°C to 180°C (86°F to 356°F). Composed primarily of aromatic, hydrogenated aromatic and naphthenic compounds, their alkyl derivatives and alkanes with carbon numbers predominantly in the range of C4 to C9. Nitrogen, sulfur and oxygen-containing aromatic and hydrogenated aromatic compounds are also present.	094114-54-2

Index number	EINECS description	CAS Number
648-151-00-7	Motor fuel produced by the reforming of the refined naphtha fraction of the products of hydrocracking of coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 30°C to 180°C (86°F to 356°F). Composed primarily of aromatic and naphthenic hydrocarbons, their alkyl derivatives and alkyl hydrocarbons having carbon numbers in the range of C4 through C9.	094114-55-3
648-152-00-2	Distillate obtained from the hydrocracking of coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 180°C to 300°C (356°F to 572°F). Composed primarily of two-ring aromatic, hydrogenated aromatic and naphthenic compounds, their alkyl derivatives and alkanes having carbon numbers predominantly in the range of C9 through C14. Nitrogen, sulfur and oxygen-containing compounds are also present.	094114-56-4
648-153-00-8	Distillate from the hydrogenation of hydrocracked middle distillate from coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 180°C to 280°C (356°F to 536°F). Composed primarily of hydrogenated two-ring carbon compounds and their alkyl derivatives having carbon numbers predominantly in the range of C9 through C14.	094114-57-5
648-154-00-3	Jet engine fuel produced by hydrogenation of the middle distillate fraction of the products of hydrocracking of coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 180°C to 225°C (356°F to 473°F). Composed primarily of hydrogenated two-ring hydrocarbons and their alkyl derivatives having carbon numbers predominantly in the range of C10 through C12.	094114-58-6
648-155-00-9	Diesel engine fuel produced by the hydrogenation of the middle distillate fraction of the products of hydrocracking of coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 200°C to 280°C (392°F to 536°F). Composed primarily of hydrogenated two-ring hydrocarbons and their alkyl derivatives having carbon numbers predominantly in the range of C11 through C14.	094114-59-7
648-156-00-4	The volatile organic liquid condensed from the gas evolved in the low temperature (less than 700°C (1292°F)) destructive distillation of coal. Composed primarily of C6-10 hydrocarbons.	090641-11-5
649-001-00-3	A complex combination of hydrocarbons obtained as the extract from a solvent extraction process. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range C15-through C30-. This stream is likely to contain 5 wt. % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064742-03-6
649-002-00-9	A complex combination of hydrocarbons obtained as the extract from a solvent extraction process. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range C20-through C50-. This stream is likely to contain 5 wt. % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064742-04-7
649-003-00-4	A complex combination of hydrocarbons obtained as the extract from a solvent extraction process. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C15-through C30-. This stream is likely to contain 5 wt. % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064742-05-8
649-004-00-X	A complex combination of hydrocarbons obtained as the extract from a solvent extraction process. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C20-through C50. This stream is likely to contain 5 wt. % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064742-1 1-6

Index number	EINECS description	CAS Number
649-005-00-5	A complex combination of hydrocarbons obtained by solvent extraction from light vacuum petroleum gas oil. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C13-through C30-.	091995-78-7
649-006-00-0	A complex combination of hydrocarbons obtained by solvent extraction from a naphthenic distillate having a viscosity of 27cSt at 100°C (212°F). It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C26- through C55- and boiling in the range of approximately 395°C to 640°C (743°F to 1184°F).	097722-04-8
649-008-00-1	A complex residuum from the atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly greater than C20 and boiling above approximately 350°C (662°F). This stream is likely to contain 5 wt % or more of 4- to 6- membered condensed ring aromatic hydrocarbons.	064741-45-3
649-009-00-7	A complex combination of hydrocarbons produced by the vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and boiling in the range of approximately 350°C to 600°C (662°F to 1112°F). This stream is likely to contain 5wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064741-57-7
649-010-00-2	A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 through C35 and boiling in the range of approximately 260°C to 500°C (500°F to 932°F). This stream is likely to contain 5 wt % or more of 4- to 6- membered condensed ring aromatic hydrocarbons.	064741-61-3
649-011-00-8	A complex combination of hydrocarbons produced as the residual fraction from distillation of the products from a catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly greater than C20 and boiling above approximately 350°C (662°F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064741-62-4
649-012-00-3	A complex combination of hydrocarbons produced as the residual fraction from distillation of the products of a hydrocracking process. It consists of hydrocarbons having carbon numbers predominantly greater than C20 and boiling above approximately 350°C (662°F).	064741-75-9
649-013-00-9	A complex combination of hydrocarbons produced as the residual fraction from distillation of the product from a thermal cracking process. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly greater than C20 and boiling above approximately 350°C (662°F). This stream is likely to contain 5 wt % or more of 4- to 6- membered condensed ring aromatic hydrocarbons.	064741-80-6
649-014-00-4	A complex combination of hydrocarbons from the distillation of the products from a thermal cracking process. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C15 through C36 and boiling in the range of approximately 260°C to 480°C (500°F to 896°F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064741-81-7
649-015-00-X	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly in the range of C 13 through C50 and boiling in the range of approximately 230°C to 600°C (446°F to 1112°F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064742-59-2

Index number	EINECS description	CAS Number
649-016-00-5	A complex combination of hydrocarbons obtained by treating an atmospheric tower residuum with hydrogen in the presence of a catalyst under conditions primarily to remove organic sulfur compounds. It consists of hydrocarbons having carbon numbers predominantly greater than C20 and boiling above approximately 350°C (662°F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064742-78-5
649-017-00-0	A complex combination of hydrocarbons obtained from a catalytic hydrosulfurization process. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and boiling in the range of approximately 350°C to 600°C (662°F to 1112°F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	064742-86-5
649-018-00-6	A complex combination of hydrocarbons obtained as the residual fraction from the distillation of the products of a steam cracking process (including steam cracking to produce ethylene). It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly greater than C14 and boiling above approximately 260°C (500°F). This stream is likely to contain 5 wt % or more of 4- to 6-membered~ondensed ring aromatic hydrocarbons.	064742-90-1
649-019-00-1	A complex residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly greater than C 11 and boiling above approximately 200°C (392°F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	068333-22-2
649-020-00-7	A complex combination of hydrocarbons obtained by treating catalytic cracked clarified oil with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists of hydrocarbons having carbon numbers Predominantly greater than C20 and boiling above approximately 350°C (662°F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	068333-26-6
649-021-00-2	A complex combination of hydrocarbons obtained by treating intermediate catalytic cracked distillates with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists of hydrocarbons having carbon numbers predominantly in the range of C11 through C30 and boiling inthe range of approximately 205°C to 450°C (401°F to 842°F). It contains a relatively large proportion of tricyclic aromatic hydrocarbons.	068333-27-7
649-022-00-8	A complex combination of hydrocarbons obtained by treatment of heavy catalytic cracked distillates with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists of hydrocarbons having carbon numbers predominantly in the range of C 15 through C35 and boiling in the range of approximately 260°C to 500°C (5000F to 932°F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	068333-28-8
649-024-00-9	The liquid product from various refinery streams, usually residues. The composition is complex and varies with the source of the crude oil.	068476-33-5
649-025-00-4	A complex residuum from the distillation of catalytic reformer fractionator residue. It boils approximately above 399°C (750°F).	068478-13-7
649-026-00-X	A complex combination of hydrocarbons produced as the residual fraction from the distillation of heavy coker gas oil and vacuum gas oil. It predominantly consists of hydrocarbons having carbon numbers predominantly greater than C 13 and boiling above approximately 230°C (446°F).	068478-17-1

Index number	EINECS description	CAS Number
649-027-00-5	A complex combination of hydrocarbons produced as the residual fraction from the distillation of heavy coker gas oil and light vacuum gas oil. It consists predominantly of hydrocarbons having carbon numbers predominantly greater than C13 and boiling above approximately 230°C (446°F).	068512-61-8
649-028-00-0	A complex residuum from the vacuum distillation of the residuum from the atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly greater than C13 and boiling above approximately 230°C (446°F).	068512-62-9
649-029-00-6	A complex residuum from the distillation of the products from a steam-cracking process. It consists predominantly of aromatic and unsaturated hydrocarbons having carbon numbers greater than C7 and boiling in the range of approximately 101°C to 555°C (214°F to 1030°F).	068513-69-9
649-030-00-1	A distillate oil having a minimum viscosity of 900 SUS at 37.7°C (100°F) to a maximum of 9000 SUS at 37.7°C (100°F).	068553-00-4
649-031-00-7	A low-sulk complex combination of hydrocarbons produced as the residual fraction from the topping plant distillation of crude oil. It is the residuum after the straight-run gasoline cut, kerosene cut and gas oil cut have been removed.	068607-30-7
649-032-00-2	A complex combination of hydrocarbons obtained by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C7 through C35 and boiling in the range of approximately 121°C to 510°C (250°F to 950°F).	068783-08-4
649-03 3-00-8	A very complex combination of hydrocarbons produced as the residual fraction from the distillation of vacuum residuum and the products from a thermal cracking process. It consists predominantly of hydrocarbons having carbon numbers predominantly greater than C20 and boiling above approximately 350°C (662°F). This stream is likely to contain 5 wt. % or more of 4 to 6-membered condensed ring aromatic hydrocarbons.	068783-13-1
649-034-00-3	A complex combination of hydrocarbons produced by the vacuum distillation of the residuum from the atmospheric distillation of crude oil.	068955-27-1
649-035-00-9	A complex residuum from the distillation of steam-cracked petroleum residues.	068955-36-2
649-036-00-4	A complex combination of hydrocarbons produced by the vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C14 through C42 and boiling in the range of approximately 250°C to 545°C (482°F to 1013°F). This stream is likely to contain 5 wt. % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	070592-76-6
649-037-00-X	A complex Combination of hydrocarbons produced by the vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C11 through C35 and boiling in the range of approximately 250°C to 545°C (482°F to 1013°F).	070592-77-7
649-038-00-5	A complex combination of hydrocarbons produced by the vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 through C50 and boiling in the range of approximately 270°C to 600°C (518°F to 1112°F). This stream is likely to contain 5 wt. % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	070592-78-8

Index number	EINECS description	CAS Number
649-039-00-0	A complex combination of hydrocarbons obtained by hydrodesulfurization of heavy coker distillate stocks. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range C18 to C44 and boiling in the range of approximately 304°C to 548°C (579°F 1018°F). Likely to contain 5% or more of 4-to 6-membered condensed ring aromatic hydrocarbons.	085117-03-9
649-040-00-6	A complex combination of hydrocarbons obtained during the production of refined petroleum tar by the distillation of steam cracked tar. It consists predominantly of aromatic and other hydrocarbons and organic sulfur compounds.	090669-75-3
649-041-00-1	A complex residuum from the vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists predominantly of hydrocarbons having carbon numbers predominantly greater than C24 and boiling above approximately 390°C (734°F).	090669-76-4
649-042-00-7	A complex combination of hydrocarbons obtained by the distillation of crude petroleum. It consists predominantly of aliphatic, aromatic and cycloaliphatic hydrocarbons having carbon numbers predominantly higher than C25 and boiling above approximately 400°C (752°F).	092045-14-2
649-043-00-2	A complex combination of hydrocarbons produced as the residual fraction from the distillation of the products from a catalytic cracking process. It consists predominantly of hydrocarbons having carbon numbers predominantly greater than C 11 and boiling above approximately 200°C (392°F).	092061-97-7
649-044-00-8	A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process which has been used as a heat transfer fluid. It consists predominantly of hydrocarbons boiling in the range of approximately 220°C to 450°C (428°F to 842°F). The stream is likely to contain organic sulfur compounds.	092201-59-7
649-045-00-3	A complex combination of hydrocarbons, sulfur compounds and metal-containing organic compounds obtained as the residue from refinery fractionation cracking processes. It produces a finished oil with a viscosity above 2cst at 100°C	093821-66-0
649-046-00-9	A complex combination of hydrocarbons obtained by the treatment and distillation of raw steam cracked naphtha. It consists predominantly of unsaturated hydrocarbons boiling in the range above approximately 180°C (356°F).	098219-64-8
649-047-00-4	A complex combination of hydrocarbons obtained by treating a petroleum stock with hydrogen. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C9 through C25 and boiling approximately in the range of approximately 150°C to 400°C (302°F to 752°F).	101316-57-8
649-048-00-X	A complex combination of hydrocarbons produced as the residual fraction from distillation of the product from a catalytic reforming process. It consists of predominantly aromatic hydrocarbons having carbon numbers predominantly in the range of C10 through C25 and boiling in the range of approximately 160°C to 400°C (320°F to 725°F). This stream is likely to contain 5 wt. % or more of 4- or 6-membered condensed ring aromatic hydrocarbons.	064741-67-9
649-049-00-5	A complex combination of hydrocarbons. It consists predominantly of aliphatic, alicyclic and aromatic hydrocarbons. It may also contain small amounts of nitrogen, oxygen and sulfur compounds. This category encompasses light, medium and heavy petroleums, as well as the oils extracted from tar sands. Hydrocarbonaceous materials requiring major chemical changes for their recovery or conversion to petroleum refinery feedstocks such as crude shale oils, upgraded shale oils and liquid coal fuels are not included in this definition.	008002-05-9

Index number	EINECS description	CAS Number
649-050-00-0	A complex combination of hydrocarbons produced by vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains a relatively large proportion of saturated aliphatic hydrocarbons normally present in this distillation range of crude oil.	064741-50-0
649-051-00-6	A complex combination of hydrocarbons produced by vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS AT 100°F (19cSt at 40°C). It contains a relatively large proportion of saturated aliphatic hydrocarbons.	064741-51-1
649-052-00-1	A complex combination of hydrocarbons produced by vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 to C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064741-52-2
649-053-00-7	A complex combination of hydrocarbons produced by vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F(19cSt at 40°C). It contains relatively few normal paraffins	064741-53-3
649-054-00-2	A complex combination of hydrocarbons obtained as a raffinate from a sulfuric acid treating process. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-18-3
649-055-00-8	A complex combination of hydrocarbons obtained as a raffinate from a sulfuric acid treating process. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-19-4
649-056-00-3	A complex combination of hydrocarbons obtained as a raffinate from a sulfuric acid process. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil having a viscosity of at least 100 SUS at 100°F (19cSt at 40°C).	064742-20-7
649-057-00-9	A complex combination of hydrocarbons obtained as a raffinate from a sulfuric acid treating process. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range C15 through C30 and produces a finished oil having a viscosity of less than 100 SUS at 100°F (19cSt at 40°C).	064742-21-8
649-058-00-4	A complex combination of hydrocarbons obtained from a treating process to remove acidic materials. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F (19cSt at 40°C). It contains a relatively large proportion of aliphatic hydrocarbons.	064742-27-4
649-059-00-X	A complex combination of hydrocarbons produced by a treating process to remove acidic materials. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity less than 100 SUS at 100°F (19cSt at 40°C).	064742-28-5

Index number	EINECS description	CAS Number
649-060-00-5	A complex combination of hydrocarbons produced by a treating process to remove acidic materials. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-34-3
649-061-00-0	A complex combination of hydrocarbons produced by a treating process to remove acidic materials. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-35-4
649-062-00-6	A complex combination of hydrocarbons obtained from fractionation of catalytic cracked hydrocarbons and treated to remove acidic impurities. It consists of hydrocarbons having carbon numbers in the range of C2 through C4, predominantly C3.	068477-73-6
649-063-00-1	A complex combination of hydrocarbons produced by the distillation of the products from a catalytic cracking process. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of C 1 through C6.	068477-74-7
649-064-00-7	A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process. It consists of aliphatic hydrocarbons having carbon numbers in the range of C 1 through C6, predominantly C 1 through C5.	068477-75-8
649-065-00-2	A complex combination of hydrocarbons obtained from the fractionation stabilization of catalytic polymerized naphtha. It consists of aliphatic hydrocarbons having carbon numbers in the range of C2 through C6, predominantly C2 through C4.	068477-76-9
649-066-00-8	A complex combination of hydrocarbons produced by distillation of products from a catalytic reforming process. It consists of hydrocarbons having carbon numbers in the range of C1 through C6, predominantly C1 through C4.	068477-79-2
649-067-00-3	A complex combination of olefinic and paraffinic hydrocarbons having carbon numbers in the range of C3 through C5 which are used as alkylation feed. Ambient temperatures normally exceed the critical temperature of these combinations,	068477-83-8
649-068-00-9	A complex combination of hydrocarbons produced by distillation of products from a catalytic fractionation process. It consists of aliphatic hydrocarbons having carbon numbers in the range of C3 through C5, predominantly C4.	068477-85-0
649-069-00-4	A complex combination of hydrocarbons produced from distillation of the gas and gasoline fractions from the catalytic cracking process. It contains predominantly ethane and ethylene.	068477-86-1
649-070-00-X	A complex combination of hydrocarbons produced by the atmospheric distillation of a butane-butylene stream. It consists of aliphatic hydrocarbons having carbon numbers predominantly in the range of C3 through C4.	068477-87-2
649-071-00-5	A complex combination of hydrocarbons produced by the distillation of products from the gas and gasoline fractions of a catalytic cracking process, It consists predominantly of propylene with some ethane and propane.	068477-90-7
649-072-00-0	A complex combination of hydrocarbons produced by distillation of products from the gas and gasoline fractions of a catalytic cracking process. It consists of aliphatic hydrocarbons having carbon numbers predominantly in the range of C2 through C4.	068477-91-8

Index number	EINECS description	CAS Number
649-073-00-6	A complex combination of hydrocarbons obtained by fractionation of miscellaneous hydrocarbon streams. It consists predominantly of hydrocarbons having carbon numbers in the range of C 1 through C4, predominantly propane.	068477-94-1
649-074-00-1	A complex combination of hydrocarbons that is used as the feed into the Girbatol unit to remove hydrogen sulfide. It consists of aliphatic hydrocarbons having carbon numbers predominantly in the range of C2 through C4.	068477-95-2
649-076-00-2	A complex combination of hydrocarbons obtained from fractionation of catalytic cracked clarified oil and thermal cracked vacuum residue. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068478-21-7
649-077-00-8	A complex combination of hydrocarbons obtained from the stabilization of catalytic cracked naphtha. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068478-22-8
649-078-00-3	A complex combination of hydrocarbons obtained from the fractionation of products from catalytic cracking, catalytic reforming and hydrodesulfurizing processes treated to remove acidic impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 1 through CS.	068478-24-0
649-079-00-9	A complex combination of hydrocarbons obtained from the fractionation stabilization of catalytic reformed naphtha. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068478-26-2
649-080-00-4	A complex combination of hydrocarbons obtained from the fractionation stabilization of straight-run naphtha, distillation tail gas and catalytic reformed naphtha stabilizer tail gas. It consists of hydrocarbons having carbon numbers in the range of C3 through C6, predominantly butane and isobutane.	068478-32-0
649-081-00-X	A complex combination of hydrocarbons obtained from fractionation of distillate tail gas, straight-run naphtha, catalytic reformed naphtha stabilizer tail gas. It consists predominantly of hydrocarbons having carbon numbers in the range of C1 through C5, predominantly methane and ethane.	068478-33-1
649-082-00-5	A complex combination of hydrocarbons obtained from the thermal cracking of vacuum residues. It consists of hydrocarbons having carbon numbers predominantly in the range of C1 through CS.	068478-34-2
649-083-00-0	A complex combination of hydrocarbons produced by distillation and condensation of crude oil. It consists of hydrocarbons having carbon numbers in the range of C3 through C5, predominantly C3 through C4.	068512-91-4
649-084-00-6	A complex combination of hydrocarbons obtained by the fractionation of the full-range straight-run naphtha. It consists of hydrocarbons having carbon numbers predominantly in the range of C2 through C6.	068513-15-5
649-085-00-1	A complex combination of hydrocarbon produced by the distillation of products from a hydrocracking process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C4. It may also contain small amounts of hydrogen and hydrogen sulfide.	068513-16-6
649-086-00-7	A complex combination of hydrocarbons obtained by the stabilization of light straight-run naphtha. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C2 through C6.	068513-17-7

Index number	EINECS description	CAS Number
649-087-00-2	A complex residuum from the distillation of streams from various refinery operations. It consists of hydrocarbons having carbon numbers in the range of C4 through C5 predominantly butane and boiling in the range of approximately -11.7°C to 27.8°C (11°F to 82°F).	068513-66-6
649-088-00-8	A complex combination of hydrocarbons provided by thermal cracking and absorber operations and by distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C1 through C4 and boiling in the range of approximately minus 164°C to minus 0.5°C (-263°F to 31°F).	068514-31-8
649-089-00-3	A complex combination of hydrocarbons obtained by subjecting hydrocarbon gases to a sweetening process to convert mercaptans or to remove acidic impurities. It consists of hydrocarbons having carbon numbers predominantly in the range of C1 through C4 and boiling in the range of approximately minus 164°C to minus 0.5°C(-263°F to 31°F).	068514-36-3
649-090-00-9	A complex combination of hydrocarbons having carbon numbers predominantly in the range of C1 through C3 and boiling in the range of approximately minus 164°C to minus 42°C (-263°F to -44°F)	068527-16-2
649-092-00-X	A complex combination of hydrocarbons produced by the distillation of crude oil and/or the cracking of tower gas oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068602-83-5
649-095-00-6	A complex combination of hydrocarbons produced by the catalytic cracking of gas oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C3 through C4.	068606-27-9
649-096-00-1	A complex combination of hydrocarbons obtained from the fractionation of depropanizer bottoms. It consists predominantly of butane, isobutane and butadiene.	068606-34-8
649-097-00-7	A complex combination obtained from various refinery processes. It consists of hydrogen, hydrogen sulfide and hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068783-07-3
649-098-00-2	A complex combination of hydrocarbons produced by the distillation of the products from a catalytic cracking process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C3 through C5.	068783-64-2
649-099-00-8	A complex combination of hydrocarbons obtained by subjecting a petroleum distillate to a sweetening process to convert mercaptans or to remove acidic impurities. It consists predominantly of saturated and unsaturated hydrocarbons having carbon numbers predominantly in the range of C2 through C4 and boiling in the range of approximately minus 51°C to minus 34°C (-60°F to -30°F).	068783-65-3
649-100-00-1	A complex combination of hydrocarbons produced by the fractionation of crude oil. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range C1 through C5.	068918-99-0
649-101-00-7	A complex combination of hydrocarbons obtained by the fractionation of combined naphtha streams. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068919-00-6
649-102-00-2	A complex combination of hydrocarbons obtained by the fractionation of light straight-run gasoline. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C 1 through C5.	068919-05-1
649-103-00-8	A complex combination of hydrocarbons produced by a naphtha unifiner desulfurization process and stripped from the naphtha product. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068919-06-2

Index number	EINECS description	CAS Number
649-104-00-3	A complex combination of hydrocarbons obtained by the catalytic reforming of straight-run naphtha and fractionation of the total effluent. It consists of methane, ethane and propane.	068919-09-5
649-105-00-9	A complex combination of hydrocarbons produced by the fractionation of the charge to the C3-C4 splitter. It consists predominantly of C3 hydrocarbons.	068919-20-0
649-106-00-4	A complex combination of hydrocarbons obtained from the fractionation of the liquid from the first tower used in the distillation of crude oil. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C 1 through C4.	068919-10-8
649-107-00-X	A complex combination of hydrocarbons obtained from fractionation of catalytic cracked naphtha. It consists of hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068952-76-1
649-108-00-5	A complex combination of hydrocarbons obtained by the fractionation of catalytic cracked naphtha and distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 1 through C4.	068952-77-2
649-109-00-0	A complex combination of hydrocarbons obtained from the separation of thermal-cracked distillates, naphtha and gas oil. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 1 through C6.	068952-81-8
649-110-00-6	A complex combination of hydrocarbons obtained from the fractionation stabilization of thermal cracked hydrocarbons from petroleum coking process. It consists of hydrocarbons having carbon numbers predominantly in the range of C 1 through C6.	068952-82-9
649-111-00-1	A complex combination of hydrocarbons produced by the distillation of products from a thermal cracking process. It consists of hydrocarbons having a carbon number predominantly of C4.	068955-28-2
649-112-00-7	A complex combination of hydrocarbons obtained by the catalytic reforming of straight-run naphtha and the fractionation of the total effluent. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C2 through C4.	068955-34-0
649-115-00-3	A complex combination of hydrocarbons produced by the distillation of products from a stream cracking process. It consists predominantly of propylene with some propane and boils in the range of approximately minus 70°C to 0°C (minus 94°F to 32°F).	092045-22-2
649-116-00-9	A complex combination of hydrocarbons produced by the distillation of the products of a stream cracking process. It consists predominantly of hydrocarbons having a carbon number of C4, predominantly 1-butane and 2-butane, containing also butane and isobutane and boiling in the range of approximately minus 12°C to 5°C (10.4°F to 41°F).	092045-23-3
649-117-00-4	A complex combination of hydrocarbons obtained by subjecting a liquified petroleum gas mix to a sweetening process to oxidize mercaptans or to remove acidic impurities. It consists predominantly of C4 saturated and unsaturated hydrocarbons.	092045-80-2
649-120-00-0	The feed gas to the amine system for removal of hydrogen sulfide. It consists of hydrogen. Carbon monoxide, carbon dioxide, hydrogen sulfide and aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C5 may also be present.	068477-65-6

Index number	EINECS description	CAS Number
649-121-00-6	Off gases produced by the benzene unit. It consists primarily of hydrogen. Carbon monoxide and hydrocarbons having carbon numbers predominantly in the range of C1 through C6, including benzene, may also be present.	068477-66-7
649-122-00-1	A complex combination of hydrocarbons obtained by recycling the gases of the benzene unit. It consists primarily of hydrogen with various small amounts of carbon monoxide and hydrocarbons having carbon numbers in the range of C1 through C6.	068477-67-8
649-123-00-7	A complex combination of hydrocarbons obtained by distillation of a blend oil. It consists primarily of hydrogen and nitrogen with various small amounts of carbon monoxide, carbon dioxide, and aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068477-68-9
649-124-00-2	A complex combination of hydrocarbons obtained from the stabilization of catalytic reformed naphtha. It consists of hydrogen and saturated hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068477-77-0
649-125-00-8	A complex combination of hydrocarbons produced by distillation of products from catalytic reforming of C6-C8 feed and recycled to conserve hydrogen. It consists primarily of hydrogen. It may also contain various small amounts carbon monoxide, carbon dioxide, nitrogen and hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068477-80-5
649-126-00-3	A complex combination of hydrocarbons produced by distillation of products from catalytic reforming of C6-C8 feed. It consists of hydrocarbons having carbon numbers in the range of C1 through C5 and hydrogen.	068477-81-6
649-128-00-4	A complex combination of hydrocarbons obtained by the extraction of hydrogen from a gas stream which consists primarily of hydrogen with small amounts of nitrogen, carbon monoxide, methane, ethane, and ethylene. It contains predominantly hydrocarbons such as methane, ethane, and ethylene with small amounts of hydrogen, nitrogen and carbon monoxide.	068477-84-9
649-129-00-X	The complex combination of dry gases from a gas concentration unit. It consists of hydrogen, hydrogen sulfide and hydrocarbons having carbon numbers predominantly in the range of C1 through C3.	068477-92-9
649-130-00-5	A complex combination of hydrocarbons produced by distillation of products from combined gas streams in a gas concentration reabsorber. It consists predominantly of hydrogen, carbon monoxide, carbon dioxide, nitrogen, hydrogen sulfide and hydrocarbons having carbon numbers in the range of C1 through C3.	068477-93-0
649-131-00-0	A complex combination obtained by absorbing hydrogen from a hydrogen rich stream. It consists of hydrogen, carbon monoxide, nitrogen, and methane with small amounts of C2 hydrocarbons.	068477-96-3
649-132-00-6	A complex combination separated as a gas from hydrocarbon gases by chilling. It consists primarily of hydrogen with various small amounts of carbon monoxide, nitrogen, methane, and C2 hydrocarbons.	068477-97-4
649-133-00-1	A complex combination obtained from recycled hydrotreated blend oil. It consists primarily of hydrogen and nitrogen with various small amounts of carbon monoxide, carbon dioxide and hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068477-98-5
649-134-00-7	A complex combination obtained from recycled reactor gases. It consists primarily of hydrogen with various small amounts of carbon monoxide, carbon dioxide, nitrogen, hydrogen sulfide, and saturated aliphatic hydrocarbons having carbon numbers in the range of C1 through C5.	068478-00-2

Index number	EINECS description	CAS Number
649-135-00-2	A complex combination obtained from the reformers. It consists primarily of hydrogen with various small amounts of carbon monoxide and aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068478-01-3
649-136-00-8	A complex combination obtained from the reforming hydrotreating process. It consists primarily of hydrogen, methane, and ethane with various small amounts of hydrogen sulfide and aliphatic hydrocarbons having carbon numbers predominantly in the range of C3 through C5.	068478-02-4
649-137-00-3	A complex combination obtained from the reforming hydrotreating process. It consists primarily of hydrogen and methane with various small amounts of carbon monoxide, carbon dioxide, nitrogen and saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C2 through C5.	068478-03-5
649-138-00-9	A complex combination obtained from the reforming hydrotreating process. It consists primarily of hydrogen with various small amounts of carbon monoxide and aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068478-04-6
649-139-00-4	A complex combination produced by distillation of products from a thermal cracking process. It consists of hydrogen, hydrogen sulfide, carbon monoxide, carbon dioxide and hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068478-05-7
649-140-00-X	A complex combination of hydrocarbons obtained from refractionation of products from a catalytic cracking process. It consists of hydrogen and hydrocarbons having carbon numbers predominantly in the range of C1 through C3.	068478-25-1
649-141-00-5	A complex combination of hydrocarbons obtained from the catalytic reforming of straight run naphtha. It consists of hydrogen and hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068478-27-3
649-142-00-0	A complex combination of hydrocarbons obtained from the stabilization of catalytic reformed naphtha. It consists of hydrogen and hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068478-28-4
649-143-00-6	A complex combination of hydrocarbons obtained by treating cracked distillates with hydrogen in the presence of a catalyst. It consists of hydrogen and saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068478-29-5
649-144-00-1	A complex combination of hydrocarbons obtained from hydrodesulfurization of straight-run naphtha. It consists of hydrogen and saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068478-30-8
649-145-00-7	A complex combination of hydrocarbons obtained from the catalytic reforming of straight-run naphtha followed by fractionation of the total effluent. It consists of hydrogen, methane, ethane and propane.	068513-14-4
649-146-00-2	A complex combination produced by the high-pressure flashing of the effluent from the reforming reactor. It consists primarily of hydrogen with various small amounts of methane, ethane, and propane.	068513-18-8
649-147-00-8	A complex combination produced by low-pressure flashing of the effluent from the reforming reactor. It consists primarily of hydrogen with various small amounts of methane, ethane, and propane.	068513-19-9

Index number	EINECS description	CAS Number
649-148-00-3	A complex combination separated by distillation of a gas stream containing hydrogen, carbon monoxide, carbon dioxide and hydrocarbons having carbon numbers in the range of C1 through C6 or obtained by cracking ethane and propane. It consists of hydrocarbons having carbon numbers predominantly in the range of C1 through C2, hydrogen, nitrogen, and carbon monoxide.	068527-15-1
649-149-00-9	A complex combination produced by treating the feed from the benzene unit with hydrogen in the presence of a catalyst followed by depentanizing. It consists primarily of hydrogen, ethane and propane with various small amounts of nitrogen, carbon monoxide, carbon dioxide and hydrocarbons having carbon numbers predominantly in the range of C1 through C6. It may contain trace amounts of benzene.	068602-82-4
649-150-00-4	A complex combination produced by the fractionation of the overhead products from the catalytic cracking process in the fluidized catalytic cracker. It consists of hydrogen, nitrogen, and hydrocarbons having carbon numbers predominantly in the range of C1 through C3.	068602-84-6
649-151-00-X	A complex combination which consists primarily of hydrogen with various small amounts of methane, ethane, and propane.	068607-11-4
649-152-00-5	A complex combination obtained by the liquid-vapor separation of the hydrocracking process reactor effluent. It consists predominantly of hydrogen and saturated hydrocarbons having carbon numbers predominantly in the range of C1 through C3.	068783-06-2
649-153-00-0	A complex combination obtained from various petroleum refining operations. It consists of hydrogen and hydrocarbons having carbon numbers predominantly in the range of C1 through C3.	068814-67-5
649-154-00-6	A complex combination obtained from the chemical reforming of naphthenes to aromatics. It consists of hydrogen and saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C2 through C4.	068814-90-4
649-155-00-1	The complex combination obtained from the depentanizer stabilization of hydrotreated kerosine. It consists primarily of hydrogen, methane, ethane, and propane with various small amounts of nitrogen, hydrogen sulfide, carbon monoxide and hydrocarbons having carbon numbers predominantly in the range of C4 through C5.	068911-58-0
649-156-00-7	A complex combination obtained from the flash drum of the unit treating sour kerosine with hydrogen in the presence of a catalyst. It consists primarily of hydrogen and methane with various small amounts of nitrogen, carbon monoxide, and hydrocarbons having carbon numbers predominantly in the range of C2 through C5.	068911-59-1
649-157-00-2	A complex combination stripped from the liquid product of the unifiner desulfurization process. It consists of hydrogen sulfide, methane, ethane, and propane.	068919-01-7
649-158-00-8	A complex combination produced by the fractionation of the overhead product of the fluidized catalytic cracking process. It consists of hydrogen, hydrogen sulfide, nitrogen, and hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068919-02-8
649-159-00-3	A complex combination produced by scrubbing the overhead gas from the fluidized catalytic cracker. It consists of hydrogen, nitrogen, methane, ethane and propane.	068919-03-9
649-160-00-9	A complex combination stripped from the liquid product of the heavy distillate hydrotreater desulfurization process. It consists of hydrogen, hydrogen sulfide, and saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068919-04-0

Index number	EINECS description	CAS Number
649-161-00-4	A complex combination obtained by the fractionation of the light ends of the platinum reactors of the platformer unit. It consists of hydrogen, methane, ethane, and propane.	068919-07-3
649-162-00-X	A complex combination produced from the first tower used in the distillation of crude oil. It consists of nitrogen and saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068919-08-4
649-163-00-5	A complex combination obtained by the fractionation of reduced crude oil. It consists of hydrogen and hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068919-11-9
649-164-00-0	A combination of hydrogen and methane obtained by fractionation of the products from the unifiner unit.	068919-12-0
649-165-00-6	A complex combination of hydrocarbons obtained from the hydrodesulfurization of naphtha. It consists of hydrogen, methane, ethane, and propane.	068952-79-4
649-166-00-1	A complex combination obtained from the hydrodesulfurization of straight-run naphtha. It consists of hydrogen and hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068952-80-7
649-167-00-7	A complex combination obtained by the fractionation of products from the fluidized catalytic cracker and gas oil desulphurizer. It consists of hydrogen and hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068955-33-9
649-168-00-2	A complex combination produced by crude distillation and catalytic cracking processes. It consists of hydrogen, hydrogen sulfide, nitrogen, carbon monoxide and paraffinic and olefinic hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068989-88-8
649-169-00-8	A complex combination produced by desulfurization of gas oils with diethanolamine. It consists predominantly of hydrogen sulfide, hydrogen and aliphatic hydrocarbons having carbon numbers in the range of C1 through C5.	092045-15-3
649-170-00-3	A complex combination obtained by separation of the liquid phase from the effluent from the hydrogenation reaction. It consists predominantly of hydrogen, hydrogen sulfide and aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C3.	092045-16-4
649-171-00-9	A complex combination of gases obtained from the reformer and from the purges from the hydrogenation reactor. It consists predominantly of hydrogen and aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	092045-17-5
649-172-00-4	A complex combination of gases obtained from flash of the effluents after the hydrogenation reaction. It consists predominantly of hydrogen and aliphatic hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	092045-18-6
649-173-00-X	A complex combination obtained as a mixture of the non-condensable portions from the product of a naphtha steam cracking process as well as residual gases obtained during the preparation of subsequent products. It consists predominantly of hydrogen and paraffinic and olefinic hydrocarbons having carbon numbers predominantly in the range of C1 through C5 with which natural gas may also be mixed.	092045-19-7
649-174-00-5	A complex combination obtained from viscosity reduction of residues in a furnace. It consists predominantly of hydrogen sulfide and paraffinic and olefinic hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	092045-20-0

Index number	EINECS description	CAS Number
649-175-00-0	A complex combination of hydrocarbons obtained by the treatment of Foot's oil with sulfuric acid. It consists predominantly of branched-chain hydrocarbons with carbon-numbers predominantly in the range of C20 through C50.	093924-31-3
649-176-00-6	A complex combination of hydrocarbons obtained by the treatment of Foot's oil with natural or modified clay in either a contacting or percolation process to remove the trace amounts of polar compounds and impurities present. It consists predominantly of branched chain hydrocarbons with carbon numbers predominantly in the range of C20 through C50.	093924-32-4
649-177-00-1	A complex combination of hydrocarbons produced by distillation of products from the cracking of crude oil. It consists of hydrocarbons having carbon numbers in the range of C3 through C4, predominantly of propane and propylene, and boiling in the range of approximately minus 5 °C to minus 1 °C (-60°F to 30°F.)	068131-75-9
649-178-00-7	The complex combination of hydrocarbons from the distillation of the products from catalytic cracked distillates and catalytic cracked naphtha. It consists predominantly of hydrocarbons having carbon numbers in the range of C1 through C4.	068307-98-2
649-179-00-2	A complex combination of hydrocarbons from the fractionation stabilization products from polymerization of naphtha. It consists predominantly of hydrocarbons having carbon numbers in the range of C1 through C4.	068307-99-3
649-180-00-8	A complex combination of hydrocarbons obtained from fractionation stabilization of catalytic reformed naphtha and from which hydrogen sulfide has been removed by amine treatment. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068308-00-9
649-181-00-3	A complex combination of hydrocarbons obtained by treating thermal cracked distillates with hydrogen in the presence of a catalyst. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068308-01-0
649-182-00-9	A complex combination of hydrocarbons obtained from catalytic hydrodesulfurization of straight run distillates and from which hydrogen sulfide has been removed by amine treatment. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068308-10-1
649-183-00-4	A complex combination of hydrocarbons obtained from the distillation of products from the catalytic cracking of gas oil. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068308-03-2
649-184-00-X	A complex combination of hydrocarbons from the distillation of products from miscellaneous hydrocarbon streams. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068308-04-3
649-185-00-5	A complex combination of hydrocarbons from the distillation of products from miscellaneous hydrocarbon streams. It consists of hydrocarbon having carbon numbers predominantly in the range of C1 through C4.	068308-05-4
649-186-00-0	A complex combination of hydrocarbons obtained from fractionation of hydrodesulfurized naphtha and distillate hydrocarbon streams and treated to remove acidic impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068308-06-5

Index number	EINECS description	CAS Number
649-187-00-6	A complex combination of hydrocarbons obtained from stripping stabilization of catalytic hydrodesulfurized vacuum gas oil and from which hydrogen sulfide has been removed by amine treatment. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068308-07-6
649-188-00-1	A complex combination of hydrocarbons obtained from fractionation stabilization of light straight run naphtha and from which hydrogen sulphide has been removed by amine treatment. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068308-09-8
649-189-00-7	A complex combination of hydrocarbons obtained from the distillation of the reaction products of propane with propylene. It consists of hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068308-11-2
649-190-00-2	A complex combination of hydrocarbons obtained from catalytic hydrodesulfurization of vacuum gas oil and from which hydrogen sulfide has been removed by amine treatment. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C6.	068308-12-3
649-191-00-8	A complex combination of hydrocarbons produced by the distillation of products from the catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly in the range of C3 through C5 and boiling in the range of approximately minus 48°C to 32°C (-54°F to 90°F).	068409-99-4
649-197-00-0	A combination of light gases. It consists predominantly of hydrogen and/or low molecular weight hydrocarbons.	068476-26-6
649-198-00-6	A complex combination of light gases produced by distillation of crude oil and by catalytic reforming of naphtha. It consists of hydrogen and hydrocarbons having carbon numbers predominantly in the range of C1 through C4 and boiling in the range of approximately minus 217°C to minus 12°C (-423°F to 10°F).	068476-29-9
649-202-00-6	A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C3 through C7 and boiling in the range of approximately minus 40°C to 80°C (-40°F to 176°F).	068476-85-7
649-203-00-1	A complex combination of hydrocarbons obtained by subjecting liquefied petroleum gas mix to a sweetening process to convert mercaptans or to remove acidic impurities. It consists of hydrocarbons having carbon numbers predominantly in the range of C3 through C7 and boiling in the range of approximately minus 40°C to 80°C (-40°F to 176°F).	068476-86-8
649-204-00-7	A complex combination of hydrocarbons from the distillation of saturated and unsaturated hydrocarbons usually ranging in carbon numbers from C3 through C6, predominantly butane and isobutane. It consists of saturated and unsaturated hydrocarbons having carbon numbers in the range of C3 through C4, predominantly isobutane.	068477-33-8
649-205-00-2	A complex combination of hydrocarbons from the distillation of saturated and unsaturated aliphatic hydrocarbons usually ranging in the carbon numbers C3 through C6. It consists of saturated and unsaturated hydrocarbons having carbon numbers in the range of C3 through C6, predominantly piperylenes.	068477-35-0
649-206-00-8	A complex combination of hydrocarbons obtained from the distillation of the butane stream. It consists of aliphatic hydrocarbons having carbon numbers predominantly in the range of C3 through C4.	068477-69-0

Index number	EINECS description	CAS Number
649-207-00-3	A complex combination of hydrocarbons produced by the distillation of products from a catalytic fractionation process. It contains predominantly ethane, ethylene, propane, and propylene.	068477-70-3
649-208-00-9	A complex combination of hydrocarbons obtained from fractionation of catalytic cracked gas oil hydrocarbon stream and treated to remove hydrogen sulfide and other acidic components. It consists of hydrocarbons having carbon numbers in the range of C3 through C5, predominantly C4.	068477-71-4
649-209-00-4	A complex combination of hydrocarbons obtained from the stabilization of catalytic cracked naphtha. It consists of aliphatic hydrocarbons having carbon numbers predominantly in the range of C3 through C5.	068477-72-5
649-210-00-X	A complex combination of hydrocarbons obtained from the fractionation stabilization products from isomerized naphtha. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C1 through C4.	068308-08-7
649-211-00-5	A complex combination of hydrocarbons obtained by the treatment of Foot's oil with activated carbon for the removal of trace constituents and impurities. It consists predominantly of saturated straight chain hydrocarbons having carbon numbers predominantly greater than C 12.	097862-76-5
649-212-00-0	A complex combination of hydrocarbons obtained by subjecting a petroleum distillate to a sweetening process to convert mercaptans or to remove acidic impurities. It consists of hydrocarbons having carbon numbers predominantly in the range of C9 through C20 and boiling in the range of approximately 150°C to 345°C (302°F to 653°F).	064741-86-2
649-213-00-6	A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction process. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of C11 through C25 and boiling in the range of approximately 205°C to 400°C (401 °F to 752°F).	064741-90-8
649-214-00-1	A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction process. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of C9 through C20 and boiling in the range of approximately 150°C to 345°C (302°F to 653°F).	064741-91-9
649-215-00-7	A complex combination of hydrocarbons obtained as a raffinate from a sulfuric acid treating process. It consists of hydrocarbons having carbon numbers predominantly in the range of C13 through C25 and boiling in the range of approximately 230°C to 400°C (446°F to 752°F).	064742-12-7
649-216-00-2	A complex combination of hydrocarbons obtained as a raffinate from a sulfuric acid treating process. It consists of hydrocarbons having carbon numbers predominantly in the range of C11 through C20 and boiling in the range of approximately 205°C to 3450C (401°F to 653°F).	064742-13-8
649-217-00-8	A complex combination of hydrocarbons obtained as a raffinate from a sulfuric acid treating process. It consists of hydrocarbons having carbon numbers predominantly in the range of C9 through C16 and boiling in the range of approximately 150°C to 290°C (302°F to 554°F).	064742-14-9
649-218-00-3	A complex combination of hydrocarbons produced by a treating process to remove acidic materials. It consists of hydrocarbons having carbon numbers predominantly in the range of C13 through C25 and boiling in the range of approximately 230°C to 400°C (446°F to 752 °F)	064742-29-6
649-219-00-9	A complex combination of hydrocarbons produced by a treating process to remove acidic materials. It consists of hydrocarbons having carbon numbers predominantly in the range of C11 through C20 and boiling in the range of approximately 205°C to 345°C (401°F to 653°F).	064742-30-9

Index number	EINECS description	CAS Number
649-220-00-4	A complex combination of hydrocarbons resulting from treatment of a petroleum fraction with natural or modified clay, usually in a percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of C9 through C20 and boiling in the range of approximately 150°C to 345°C (302°F to 653°F).	064742-38-7
649-221-00-X	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly in the range of C11 through C25 and boiling in the range of approximately 205°C to 400°C (401°F to 752°F).	064742-46-7
649-222-00-5	A complex combination of hydrocarbons obtained from a petroleum stock by treating with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C13 through C25 and boiling in the range of approximately 230°C to 400°C (446°F to 752°F).	064742-79-6
649-223-00-0	A complex combination of hydrocarbons obtained from a petroleum stock by treating with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists of hydrocarbons having carbon numbers predominantly in the range of C11 through C25 and boiling in the range of approximately 205°C to 400°C (401°F to 752°F).	064742-80-9
649-224-00-6	A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C9 through C20 and boiling in the range of approximately 163°C to 357°C (325°F to 675°F).	068334-30-5
649-225-00-1	A distillate oil having a minimum viscosity of 32.6 SUS at 37.7°C (100°F) to a maximum of 37.9 SUS at 37.7°C (100°F).	068476-30-2
649-226-00-7	A distillate oil having a minimum viscosity of 45 SUS at 37.7°C (100°F) to a maximum of 125 SUS at 37.7°C (100°F).	068476-31-3
649-227-00-2	A distillate oil having a minimum viscosity of 32.6 SUS at 37.7°C (100°F) to a maximum of 40.1 SUS at 37.7°C (100°F).	068476-34-6
649-228-00-8	A complex Combination of hydrocarbons from the distillation of catalytic reformer fractionator residue. It boils in the range of approximately 343°C to 399°C (650°F to 750°F).	068477-29-2
649-229-00-3	A complex combination of hydrocarbons from the distillation of catalytic reformer fractionator residue. It boils in the range of approximately 288°C to 371°C (550°F to 700°F).	068477-30-5
649-230-00-9	The complex combination of hydrocarbons from the distillation of catalytic reformer fractionator residue. It boils approximately below 288°C (550°F).	068477-31-6
649-231-00-4	A complex combination of hydrocarbons obtained by the subjection of a petroleum fraction to several of the following steps: filtration, centrifugation, atmospheric distillation, vacuum distillation, acidification, neutralization, and clay treatment. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C10 through C20.	090640-93-0
649-232-00-X	A complex combination of hydrocarbons obtained from the distillation of a catalytically reformed petroleum cut. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C10 through C16 and boiling in the range of approximately 200°C to 300°C (392°F to 572°F).	091995-34-5

Index number	EINECS description	CAS Number
649-233-00-5	A distillate obtained from the redistillation of a complex combination of hydrocarbons obtained by the distillation of the effluents from a severe catalytic hydrotreatment of paraffins. It boils in the range of approximately 190°C to 330°C (374°F to 594°F).	093924-33-5
649-235-00-6	A complex combination of hydrocarbons obtained as first runnings from the vacuum distillation of effluents from the treatment of a middle distillate with hydrogen. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C16 through C20 and boiling in the range of approximately 290°C to 350°C (554°F to 662°F). It produces a finished oil having a viscosity of 2cSt at 100°C (212°F).	097675-85-9
649-236-00-1	A complex combination of hydrocarbons obtained as first runnings from the vacuum distillation of effluents from the treatment of heavy paraffins with hydrogen in the presence of a catalyst. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C12 through C20 and boiling in the range of approximately 230°C to 350°C (446°F to 662°F). It produces a finished oil having a viscosity of 2cSt at 100°C (212°F).	097675-86-0
649-237-00-7	A complex combination of hydrocarbons obtained by extraction of the aromatics from a light naphthenic distillate having a viscosity of 2.2cSt at 40°C (104°F). It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C11 through C17 and boiling in the range of approximately 200°C to 300°C (392°F to 572°F).	097722-08-2
649-238-00-2	A complex combination of hydrocarbons obtained from the redistillation of the effluents from the treatment of paraffins with hydrogen in the presence of a catalyst. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C17 through C27 and boiling in the range of approximately 330°C to 340°C (626°F to 644°F).	097862-78-7
649-239-00-8	A complex combination of hydrocarbons obtained by the treatment of a petroleum oil fraction with activated charcoal for the removal of traces of polar constituents and impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C12 through C28.	100683-97-4
649-240-00-3	A complex combination of hydrocarbons obtained by the treatment of petroleum with activated charcoal for the removal of trace polar constituents and impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C16 through C36.	100683-98-5
649-241-00-9	A complex combination of hydrocarbons obtained by the treatment of petroleum with bleaching earth for the removal of trace polar constituents and impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C16 through C36.	100683-99-6
649-243-00-X	A complex combination of hydrocarbons having carbon numbers predominantly in the range of C12 through C50. May contain organic salts of alkali metals, alkaline earth metals, and or aluminium compounds.	074869-21-9
649-244-00-5	A complex combination of hydrocarbons obtained from a petroleum fraction by solvent crystallization (solvent dewaxing) or as a distillation fraction from a very waxy crude. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon numbers predominantly greater than C20.	064742-61-6
649-245-00-0	A complex combination of hydrocarbons obtained as a raffinate by treatment of a petroleum slack wax fraction with sulfuric acid treating process. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon numbers predominantly greater than C20.	090669-77-5

Index number	EINECS description	CAS Number
649-246-00-6	A complex combination of hydrocarbons obtained by treatment of a petroleum slack wax fraction with natural or modified clay in either a contacting or percolation process. It consists predominantly of saturated straight and branched hydrocarbons having carbon numbers predominantly greater than C20.	090669-78-6
649-247-00-1	A complex combination of hydrocarbons obtained by treating slack wax with hydrogen in the presence of a catalyst. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon numbers predominantly greater than C20.	092062-09-4
649-248-00-7	A complex combination of hydrocarbons obtained from a petroleum fraction by solvent deparaffination. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon numbers predominantly greater than C12.	092062-10-7
649-249-00-2	A complex combination of hydrocarbons obtained by treatment of low-melting petroleum slack wax with hydrogen in the presence of catalyst. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon numbers predominantly greater than C12.	092062-11-8
649-250-00-8	A complex combination of hydrocarbons obtained by the treatment of low-melting slack wax with activated carbon for the removal of trace polar constituents and impurities. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon numbers predominantly greater than C12.	097863-04-2
649-251-00-3	A complex combination of hydrocarbons obtained by the treatment of low-melting petroleum slack wax with bentonite for removal of trace polar constituents and impurities. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon numbers predominantly greater than C12.	097863-05-3
649-252-00-9	A complex combination of hydrocarbons obtained by the treatment of low-melting petroleum slack wax with silicic acid for the removal of trace polar constituents and impurities. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon numbers predominantly greater than C12.	097863-06-4
649-253-00-4	A complex combination of hydrocarbons obtained by treatment of petroleum slack wax with activated charcoal for the removal of trace polar constituents and impurities.	100684-49-9
649-254-00-X	A complex combination of hydrocarbons obtained as a semi-solid from dewaxing paraffinic residual oil. It consists predominantly of saturated crystalline and liquid hydrocarbons having carbon numbers predominantly greater than C25.	008009-03-8
649-255-00-5	A complex combination of organic compounds, predominantly high molecular weight carboxylic acids, obtained by the air oxidation of petrolatum.	064743-01-7
649-256-00-0	A complex combination of hydrocarbons obtained when petrolatum is treated with Al2O3 (aluminium oxide) to remove polar components and impurities. It consists predominantly of saturated, crystalline, and liquid hydrocarbons having carbon numbers predominantly greater than C25.	085029-74-9
649-257-00-6	A complex combination of hydrocarbons obtained as a semi-solid from dewaxed paraffinic residual oil treated with hydrogen in the presence of a catalyst. It consists predominantly of saturated microcrystalline and liquid hydrocarbons having carbon numbers predominantly greater than C20.	092045-77-7
649-258-00-1	A complex combination of hydrocarbons obtained by the treatment of petroleum petrolatum with activated carbon for the removal of trace polar constituents and impurities. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly greater than C20.	097862-97-0

Index number	EINECS description	CAS Number
649-259-00-7	A complex combination of hydrocarbons obtained by the treatment of petroleum petrolatum with silicic acid for the removal of trace polar constituents and impurities. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly greater than C20.	097862-98-1
649-260-00-2	A complex combination of hydrocarbons obtained by the treatment of petrolatum with bleaching earth for the removal of traces of polar constituents and impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of greater than C25.	100684-33-1
649-261-00-8	A complex combination of hydrocarbons separated from natural gas by processes such as refrigeration or absorption. It consists predominantly of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C4 through C8 and boiling in the range of approximately minus 20 to 120°C (-4°F to 248°F).	008006-61-9
649-262-00-3	Refined, partly refined, or unrefined petroleum products produced by the distillation of natural gas. It consists of hydrocarbons having carbon numbers predominantly in the range of C5 through C6 and boiling in the range of approximately 100°C to 200°C (212°F to 392°F).	008030-30-6
649-263-00-9	A complex combination of hydrocarbons obtained by the fractional distillation of petroleum. This fraction boils in a range of approximately 20°C to 135°C (58°F to 275°F).	008032-32-4
649-264-00-4	A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C6 through C12 and boiling in the range of approximately 65°C to 230°C (149°F to 446°F).	064741-41-9
649-265-00-X	A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C11 and boiling in the range of approximately minus 20°C to 220°C (-4°F to 428°F).	064741-42-0
649-266-00-5	A complex combination of hydrocarbons produced by the distillation of crude oil. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of C4 through C10 and boiling in the range of approximately minus 20°C to 180°C (-4°F to 356°F).	064741-46-4
649-267-00-0	A complex combination of hydrocarbons obtained from the distillation of crude oil or natural gasoline. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C5 and C 10 and boiling in the range of approximately 35°C to 160°C (95°F to 320°F).	064742-89-8
649-268-00-6	A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C2 through C7 and boiling in the range of approximately -88°C to 99°C (-127°F to 210°F).	068410-05-9
649-269-00-1	A complex combination of hydrocarbons separated from the gases from vapour recovery systems by cooling. It consists of hydrocarbons having carbon numbers predominantly in the range C4 through C11 and boiling in the range approximately minus 20°C to 196°C (-4°F to 384°F).	068514-15-8
649-270-00-7	A complex combination of hydrocarbons produced from the topping plant by the distillation of crude oil. It boils in the range approximately 36.1°C to 193.3°C (97°F to 380°F).	068606-11-1
649-271-00-2	A complex combination of hydrocarbons produced from the distillation of naphtha streams from various refinery processes. It consists of hydrocarbons having carbon numbers predominantly in the range C5 through C12 and boiling in the range of approximately 0°C to 230°C (25°F to 446°F).	068783-12-0

Index number	EINECS description	CAS Number
649-272-00-8	A complex combination of hydrocarbons having carbon numbers predominantly in the range of C3 through C6.	068921-08-4
649-273-00-3	A complex combination of hydrocarbons obtained from a distillation process of crude petroleum. It consists predominantly of hydrocarbons having carbon numbers in the range of C8 through C12 and boiling in the range of approximately 130°C to 210°C (266°F to 410°F).	101631-20-3
649-274-00-9	A complex combination of hydrocarbons produced by distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers from C3 through C5. It consists predominantly of branched chain saturated hydrocarbons having carbon numbers predominantly in the range of C7 through C12 and boiling in the range of approximately 90°C to 220°C (194°F to 428°F).	064741-64-6
649-275-00-4	A complex combination of hydrocarbons produced by the distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers from C3 to C5. It consists of predominantly branched chain saturated hydrocarbons having carbon numbers predominantly in the range of C9 through C12 and boiling in the range of approximately 150°C to 220°C (302°F to 428°F).	064741-65-7
649-276-00-X	A complex combination of hydrocarbons produced by the distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers from C3 through C5. It consists of predominantly branched chain saturated hydrocarbons having carbon numbers predominantly in the range of C7 through C10 and boiling in the range of approximately 90°C to 160°C (194°F to 320°F).	064741-66-8
649-277-00-5	A complex combination of hydrocarbons obtained from catalytic isomerisation of straight chain paraffinic C4 through C6 hydrocarbons. It consists predominantly of saturated hydrocarbons such as isobutane, isopentane, 2,2-dimethylbutane, 2-methylpentane, and 3-methylpentane.	064741-70-4
649-278-00-0	A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction process. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of C5 through C11 and boiling in the range of approximately 35°C to 190°C (95°F to 374°F).	064741-84-0
649-279-00-6	A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction process. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of C7 through C12 and boiling in the range of approximately 90°C to 230°C (194°F to 446°F).	064741-92-0
649-280-00-1	A complex combination of hydrocarbons obtained as the raffinate from the UDEX extraction process on the catalytic reformer stream. It consists of saturated hydrocarbons having carbon numbers predominantly in the range of C6 through C9.	068410-71-9
649-281-00-7	The complex combination of hydrocarbons obtained as a raffinate from a Lurgi separation unit. It consists predominantly of non-aromatic hydrocarbons with various small amounts of aromatic hydrocarbons having carbon numbers predominantly in the range of C6 through C8.	068425-35-4
649-282-00-2	A complex combination of hydrocarbons produced by the distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers from C3 through C5. It consists of predominantly branched chain saturated hydrocarbons having carbon numbers predominantly in the range of C7 through C12 with some butanes and boiling in the range of approximately 35°C to 200°C (95°F to 428°F).	068527-27-5
649-283-00-8	A complex combination of hydrocarbons obtained as the raffinates from a solvent extraction process of hydrotreated light distillate from steam-cracked naphtha.	091995-53-8

Index number	EINECS description	CAS Number
649-284-00-3	A complex combination of hydrocarbons obtained by alkylation of butanes. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C4 through C12, rich in isoctane, and boiling in the range of approximately 35°C to 210°C (95°F to 410°F).	092045-49-3
649-285-00-9	A combination of hydrocarbons obtained from the distillation of hydrotreated naphtha followed by a solvent extraction and distillation process. It consists predominantly of saturated hydrocarbons boiling in the range of approximately 94°C to 99°C (201°F to 210°F).	092045-55-1
649-286-00-4	A complex combination of hydrocarbons obtained by the distillation of a gasoline which has been catalytically isomerized. It consists predominantly of hexane isomers boiling in the range of approximately 60°C to 66°C (140°F to 151°F).	092045-58-4
649-287-00-X	A complex combination of hydrocarbons obtained by the sorption of benzene from a catalytically fully hydrogenated benzene-rich hydrocarbon cut that was distillatively obtained from prehydrogenated cracked naphtha. It consists predominantly of paraffinic and naphthenic hydrocarbons having carbon numbers predominantly in the range of C6 through C7 and boiling in the range of approximately 70°C to 100°C (158°F to 212°F).	092045-64-2
649-288-00-5	A complex combination of hydrocarbons obtained by the distillation of hydrotreated naphtha followed by solvent extraction. It consists predominantly of saturated hydrocarbons and boiling in the range of approximately 65°C to 70°C (149°F to 158°F).	101316-67-0
649-289-00-0	A complex combination of hydrocarbons produced by a distillation of products from a catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly in the range of C6 through C12 and boiling in the range of approximately 65°C to 230°C (148°F to 446°F). It contains a relatively large proportion of unsaturated hydrocarbons.	064741-54-4
649-290-00-6	A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C11 and boiling in the range of approximately minus 20°C to 190°C (-4°F to 374°F). It contains a relatively large proportion of unsaturated hydrocarbons.	064741-55-5
649-291-00-1	A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly in the range of C3 through C11 and boiling in a range approximately up to 204°C (400°F).	068476-46-0
649-292-00-7	A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly in the range of C1 through C5.	068783-09-5
649-293-00-2	A complex combination of hydrocarbons obtained by the treating a light distillate from steam cracked naphtha. It consists predominantly of aromatic hydrocarbons.	091995-50-5
649-294-00-8	A complex combination of hydrocarbons obtained by subjecting a catalytic cracked petroleum distillate to a sweetening process to convert mercaptans or to remove acidic impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C6 through C12 and boiling in the range of approximately 60°C to 200°C (140°F to 392°F).	092045-50-6
649-295-00-3	A complex combination of hydrocarbons obtained by subjecting naphtha from a catalytic cracking process to a sweetening process to convert mercaptans or to remove acidic impurities. It consists predominantly of hydrocarbons boiling in the range of approximately 35°C to 210°C (95°F to 410°F).	092045-59-5

Index number	EINECS description	CAS Number
649-296-00-9	A complex Combination of hydrocarbons produced by the distillation of a cut from the catalytic cracking process, having undergone an alkaline washing. It consists predominantly of hydrocarbons having carbon numbers in the range of C8 through C12 and boiling in the range of approximately 130°C to 210°C (266°F to 410°F).	092128-94-4
649-297-00-4	A complex combination of hydrocarbons obtained by the distillation of products from a catalytic cracking process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C8 through C12 and boiling in the range of approximately 140°C to 210°C (284°F to 410°F).	101794-97-2
649-299-00-5	A complex combination of hydrocarbons produced from the distillation of products from a catalytic reforming process. It consists of hydrocarbons having carbon numbers predominantly in the range of C5 through C11 and boiling in the range of approximately 35°C to 190°C (95°F to 374°F). It contains a relatively high proportion of aromatic and branched chain hydrocarbons. This stream may contain 10 vol % or more benzene.	064741-63-5
649-300-00-9	A complex combination of hydrocarbons produced from the distillation of products from a catalytic reforming process. It consists of predominantly aromatic hydrocarbons having carbon numbers predominantly in the range of C7 through C12 and boiling in the range of approximately 90°C to 230°C (194°F to 446°F).	064741-68-0
649-301-00-4	A complex combination of hydrocarbons from the distillation of products from a catalytic reforming process. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of C3 through C6 and boiling in the range of approximately minus 49°C to 63°C (-57°F to 145°F).	068475-79-6
649-303-00-5	A complex residuum from the catalytic reforming of C6-C8 feed. It consists of hydrocarbons having carbon numbers predominantly in the range of C2 through C6.	068478-15-9
649-304-00-0	A complex combination of hydrocarbons obtained from the distillation of products from a catalytic reforming process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range C5 through C8 and boiling in the range of approximately 35°C to 120°C (95°F to 248°F). It contains a relatively large proportion of branched chain hydrocarbons with the aromatic components removed.	068513-03-1
649-305-00-6	A complex combination of hydrocarbons obtained by the catalytic reforming of straight run naphtha followed by the fractionation of the total effluent. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C2 through C6.	068513-63-3
649-306-00-1	The complex combination of hydrocarbons obtained in a hydrofiner-powerformer process and boiling in a range of approximately 27°C to 210°C (80°F to 410°F).	068514-79-4
649-307-00-7	A complex combination of hydrocarbons produced by the distillation of the products from a catalytic reforming process. It consists of hydrocarbons having carbon numbers predominantly in the range of C5 through C12 and boiling in the range of approximately 35°C to 230°C (95°F to 446°F).	068919-37-9
649-308-00-2	A complex combination of hydrocarbons produced by the distillation of products from a catalytic reforming process. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C12 and boiling in the range of approximately 30°C to 220°C (90°F to 430°F). It contains a relatively large proportion of aromatic and branched chain hydrocarbons. This stream may contain 10 vol.% or more benzene.	068955-35-1

Index number	EINECS description	CAS Number
649-309-00-8	A complex combination of alkylbenzenes obtained by catalytic reforming of petroleum naphtha. It consists predominantly of alkylbenzenes having carbon numbers predominantly in the range of C8 through C10 and boiling in the range of approximately 160°C to 180°C (320°F to 356°F).	085116-58-1
649-311-00-9	A complex combination of hydrocarbons obtained by separation from the platformate-containing fraction. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C7 through C12 (primarily C8) and can contain nonaromatic hydrocarbons both boiling in the range of approximately 130°C to 200°C (266°F to 392°F).	093571-75-6
649-312-00-4	A complex high octane combination of hydrocarbons obtained by the catalytic dehydrogenation of a predominantly naphthenic naphtha. It consists predominantly of aromatics and non-aromatics having carbon numbers predominantly in the range of C5 through C11 and boiling in the range of approximately 45°C to 185°C (13°F to 365°F).	093572-29-3
649-313-00-X	A complex combination of hydrocarbons obtained by separation from the platformate-containing fraction. It consists predominantly of nonaromatic hydrocarbons having carbon numbers predominantly in the range of C7 through C12 and boiling in the range of approximately 120°C to 210°C (248°F to 380°F) and C9 and higher aromatic hydrocarbons.	093572-35-1
649-314-00-5	A complex combination of hydrocarbons obtained by separation from the platformate containing fraction. It consists predominantly of nonaromatic hydrocarbons having carbon numbers predominantly in the range of C5 through C11 and boiling in the range of approximately 35°C to 125°C (94°F to 257°F), benzene and toluene.	093572-36-2
649-315-00-0	A complex combination of hydrocarbons obtained by the treatment of Foot's oil with silicic acid for the removal of trace constituents and impurities. It consists predominantly of straight chain hydrocarbons having carbon numbers predominantly greater than C 12.	097862-77-6
649-316-00-6	A complex combination of hydrocarbons from distillation of products from a thermal cracking process. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C4 through C8 and boiling in the range of approximately minus 10°C to 130°C (14°F to 266°F).	064741-74-8
649-317-00-1	A complex combination of hydrocarbons from distillation of the products from a thermal cracking process. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C6 through C12 and boiling in the range of approximately 65°C to 220°C (148°F to 428°F).	064741-83-9
649-318-00-7	The complex combination of hydrocarbons from the distillation of the products from the thermal cracking of ethane and propane. This higher boiling point fraction consists predominantly of C5-C7 aromatic hydrocarbons with some unsaturated aliphatic hydrocarbons having carbon number predominantly C5. This stream may contain benzene.	067891-79-6
649-319-00-2	The complex combination of hydrocarbons from the distillation of the products from the thermal cracking of ethane and propane. This lower boiling point fraction consists predominantly of C5-C7 aromatic hydrocarbons with some unsaturated aliphatic hydrocarbons having a carbon number predominantly of C5. This stream may contain benzene.	067891-80-9
649-320-00-8	The complex combination of hydrocarbons obtained by the pyrolysis fractionation at 816°C (1500°F) of naphtha and raffinate. It consists predominantly of hydrocarbons having a carbon number of C9 and boiling at approximately 204°C (400°F).	068425-29-6

Index number	EINECS description	CAS Number
649-321-00-3	A complex combination of hydrocarbons obtained by the fractionation pyrolysis at 816°C (1500°F) of naphtha and raffinate. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C6 through C8, including benzene.	068475-70-7
649-322-00-9	A complex combination of hydrocarbons produced by the distillation of thermally cracked naphtha and/or gas/oil. It consists predominantly of olefinic hydrocarbons having a carbon number of C5 and boiling in the range of approximately 33°C to 60°C (91°F to 140°F).	068603-00-9
649-323-00-4	A complex combination of hydrocarbons produced by the extractive distillation of thermal cracked naphtha and/or gas/oil. It consists predominantly of hydrocarbons having a carbon number of C5 with some dimerized C5 olefins and boiling in the range of approximately 33°C to 184°C (91°F to 363°F).	068603-01-0
649-324-00-X	A complex combination of hydrocarbons produced by the extractive distillation of thermal cracked naphtha and/or gas/oil. It consists of paraffinic and olefinic hydrocarbons, predominantly isoamylanes such as 2-methyl- 1-butene and 2-methyl-2-butene and boiling in the range of approximately 31°C to 40°C (88°F to 104°F).	068603-03-2
649-325-00-5	A complex combination of hydrocarbons produced by the distillation of products from a thermal cracking process. It consists predominantly of aromatic hydrocarbons, primarily benzene.	068955-29-3
649-326-00-0	A complex combination of hydrocarbons obtained by subjecting a petroleum distillate from the high temperature thermal cracking of heavy oil fractions to a sweetening process to convert mercaptans. It consists predominantly of aromatics, olefins and saturated hydrocarbons boiling in the range of approximately 20°C to 100°C (68°F to 212°F).	092045-65-3
649-327-00-6	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly in the range of C6 through C13 and boiling in the range of approximately 65°C to 230°C (149°F to 446°F).	064742-48-9
649-328-00-1	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C11 and boiling in the range of approximately minus 20°C to 190°C (-4°F to 374°F).	064742-49-0
649-329-00-7	A complex combination of hydrocarbons obtained from a catalytic hydrodesulfurization process. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C11 and boiling in the range of approximately minus 20°C to 190°C (-4°F to 374°F).	064742-73-0
649-330-00-2	A complex combination of hydrocarbons obtained from a catalytic hydrodesulfurization process. It consists of hydrocarbons having carbon numbers predominantly in the range of C7 through C12 and boiling in the range of approximately 90°C to 230°C (194°F to 446°F).	064742-82-1
649-331-00-8	A complex combination of hydrocarbons obtained by the distillation of products from a middle distillate hydrotreating process. It consists of hydrocarbons having carbon numbers predominantly in the range of C5 through C10 and boiling in the range of approximately 127°C to 188°C (262°F to 370°F).	068410-96-8
649-332-00-3	A complex combination of hydrocarbons obtained by the distillation of products from the light distillate hydrotreating process. It consists of hydrocarbons having carbon numbers predominantly in the range of C6 through C9 and boiling in the range of approximately 3°C to 194°C (37°F to 382°F).	068410-97-9

Index number	EINECS description	CAS Number
649-333-00-9	A complex combination of hydrocarbons obtained by the distillation of the products from a heavy naphtha hydrotreating process. It consists of hydrocarbons having carbon numbers predominantly in the range C3 through C6 and boiling in the range of approximately -49°C to 68°C (-57°F to 155°F).	068410-98-0
649-334-00-4	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C8 through C 10 and boiling in the range of approximately 135°C to 210°C (275°F to 410°F).	068512-78-7
649-335-00-X	A complex combination of hydrocarbons obtained by the fractionation of hydrodesulfurized thermal cracker distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range C5 to C11 and boiling in the range of approximately 23°C to 195°C (73°F to 383°F).	085116-60-5
649-336-00-5	A complex combination of hydrocarbons obtained from the distillation of a petroleum fraction. It consists predominantly of alkanes and cycloalkanes boiling in the range of approximately minus 20°C to 190°C (-4°F to 374°F).	085116-61-6
649-338-00-6	A complex combination of hydrocarbons obtained from a catalytic hydrodesulfurization process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C4 through C 11 and boiling in the range of approximately 30°C to 250°C (86°F to 482°F).	092045-52-8
649-339-00-1	A complex combination of hydrocarbons obtained by treating a petroleum fraction, derived from a pyrolysis process, with hydrogen in the presence of a catalyst. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C5 through C 11 and boiling in the range of approximately 35°C to 190°C (95°F to 374°F).	092045-57-3
649-340-00-7	A complex combination of hydrocarbons obtained by distillation from the product of a naphtha steam cracking process and subsequent catalytic selective hydrogenation of gum formers. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C 12 and boiling in the range of approximately 30°C to 2 0°C.(86°F to 446 °F).	092045-61-9
649-341-00-2	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists predominantly of cycloparaffinic hydrocarbons having carbon numbers predominantly in the range of C6 through C7 and boiling in the range of approximately 73°C to 85°C (163°F to 185°F).	092062 - 1 5-2
649-342-00-8	A complex combination of hydrocarbons produced from the separation and subsequent hydrogenation of the products of a steam-cracking process to produce ethylene. It consists predominantly of saturated and unsaturated paraffins, cyclic paraffins and cyclic aromatic hydrocarbons having carbon numbers predominantly in the range of C4 through C10 and boiling in the range of approximately 50°C to 200°C (122°F to 392°F). The proportion of benzene hydrocarbons may vary up to 30 wt % and the stream may also contain small amounts of sulphur and oxygenated compounds.	093165-55-0
649-343-00-3	A complex combination of hydrocarbons obtained as solvents which have been subjected to hydrotreatment in order to convert aromatics to naphthenes by catalytic hydrogenation.	093763-33-8
649-344-00-9	A complex combination of hydrocarbons obtained as solvents which have been subjected to hydrotreatment in order to convert aromatics to naphthenes by catalytic hydrogenation.	093763-34-9
649-345-00-4	A colourless refined petroleum distillate that is free from rancid or objectionable odours and that boils in the range of approximately 300°F to 400°F	008052-41-3

Index number	EINECS description	CAS Number
649-346-00-X	A complex combination of hydrocarbons separated as a liquid from natural gas in a surface separator by retrograde condensation. It consists mainly of hydrocarbons having carbon numbers predominantly in the range of C2 to C20. It is a liquid at atmospheric temperature and pressure.	064741-47-5
649-347-00-5	A complex combination of hydrocarbons separated as a liquid from natural gas in a gas recycling plant by processes such as refrigeration or absorption. It consists mainly of saturated aliphatic hydrocarbons having carbon numbers in the range of C2 through C8.	064741-48-6
649-348-00-0	A complex combination of hydrocarbons from distillation of the products from a hydrocracking process. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C4 through C10 and boiling in the range of approximately minus 20°C to 180°C (-4°F to 356°F).	064741-69-1
649-349-00-6	A complex combination of hydrocarbons from distillation of the products from a hydrocracking process. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C6 through C12, and boiling in the range of approximately 65°C to 230°C (148°F to 446°F).	064741-78-2
649-350-00-1	A complex combination of hydrocarbons obtained by subjecting a petroleum naphtha to a sweetening process to convert mercaptans or remove acidic impurities. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C12 and boiling in the range of approximately minus 10°C to 230°C (14°F to 446°F).	064741-87-3
649-351-00-7	A complex combination of hydrocarbons obtained as a raffinate from a sulfuric acid treating process. It consists of hydrocarbons having carbon numbers predominantly in the range of C7 through C12 and boiling in the range of approximately 90°C to 230°C (194°F to 446°F).	064742-15-0
649-352-00-2	A complex combination of hydrocarbons produced by a treating process to remove acidic materials. It consists of hydrocarbons having carbon numbers predominantly in the range of C6 through C12 and boiling in the range of approximately 65°C to 230°C (149°F to 446°F).	064742-22-9
649-353-00-8	A complex combination of hydrocarbons produced by a treating process to remove acidic materials. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C11 and boiling in the range of approximately minus 20°C to 190°C (-4°F to 374°F).	064742-23-0
649-354-00-3	A complex combination of hydrocarbons obtained from the catalytic dewaxing of a petroleum fraction. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C5 through C12 and boiling in the range of approximately 35°C to 230°C (95°F to 446°F).	064742-66-1
649-355-00-9	A complex combination of hydrocarbons obtained by the distillation of the products from a steam-cracking process. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C4 through C11 and boiling in the range of approximately minus 20°C to 190°C (-4°F to 374°F). This stream is likely to contain 10 vol % or more benzene.	064742-83-2
649-356-00-4	A complex combination of hydrocarbons obtained from distillation of aromatic streams. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C8 through C10 and boiling in the range of approximately 135°C to 210°C (275°F to 410°F).	064742-95-6
649-358-00-5	A complex combination of hydrocarbons from the distillation of hydrocarbons usually ranging in carbon numbers from C3 through C5 predominantly isopentane and 3-methyl-1-butene. It consists of saturated and unsaturated hydrocarbons having carbon numbers in the range of C3 through C5 predominantly 2-methyl-2-butene.	068477-34-9

Index number	EINECS description	CAS Number
649-359-00-0	A complex combination of hydrocarbons obtained from the distillation of polymerized steam-cracked petroleum distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C5 through C12.	068477-50-9
649-360-00-6	A complex Combination of organic compounds obtained by the distillation of products from a steam-cracking process. It consists of unsaturated hydrocarbons having carbon numbers predominantly in the range of C5 through C 12.	068477-53-2
649-362-00-7	A complex combination of organic compounds produced by cold acid unit extraction of saturated and unsaturated aliphatic hydrocarbons usually ranging in carbon numbers from C3 through C6, predominantly pentanes and amylanes. It consists predominantly of saturated and unsaturated hydrocarbons having carbon numbers in the range of C4 through C6, predominantly C5.	068477-61-2
649-363-00-2	A complex combination of hydrocarbons obtained from a catalytic cracked gas stream. It consists of aliphatic hydrocarbons having carbon numbers predominantly in the range of C4 through C6.	068477-89-4
649-364-00-8	A complex residuum from the distillation of butane stream. It consists of aliphatic hydrocarbons having carbon numbers predominantly in the range of C4 through C6.	068478-12-6
649-365-00-3	A complex residuum from the atmospheric distillation of the butane-butylene stream. It consists of aliphatic hydrocarbons having carbon numbers predominantly in the range of C4 through C6.	068478-16-0
649-366-00-9	A complex combination of hydrocarbons produced by the distillation of products from a fluid coker. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C4 through C 15 and boiling in the range of approximately 43°C to 250°C (110°F to 500°F).	068513-02-0
649-367-00-4	A complex combination of hydrocarbons produced by the distillation of products from a steam-cracking process. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C7 through C 12 and boiling in the range of approximately 130°C to 220°C (266°F to 428°F).	068516-20-1
649-368-00-X	A complex combination of hydrocarbons resulting from treatment of full-range straight-run naphtha with natural or modified clay, usually in a percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C11 and boiling in the range of approximately minus 20°C to 220°C (-4°F to 429°F).	068527-21-9
649-369-00-5	A complex combination of hydrocarbons resulting from treatment of light straight-run naphtha with a natural or modified clay, usually in a percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of C7 through C 10 and boiling in the range of approximately 93°C to 180°C (200°F to 356°F).	068527-22-0
649-370-00-0	A complex combination of hydrocarbons produced by distillation of products from a steam cracking process. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C7 through C9 and boiling in the range of approximately 110°C to 165°C (230°F to 329°F).	068527-23-1
649-371-00-6	A complex combination of hydrocarbons produced by distillation of products from a steam-cracking process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C4 through C12 and boiling in the range of approximately 80°C to 218°C (176°F to 424°F).	068527-26-4

Index number	EINECS description	CAS Number
649-373-00-7	A complex combination of hydrocarbons obtained from the fractionation of depropanizer bottoms. It consists of hydrocarbons having carbon numbers predominantly greater than C5.	068606-10-0
649-374-00-2	A complex combination of hydrocarbons obtained by subjecting a petroleum distillate to a sweetening process to convert mercaptans or to remove acidic impurities. It consists predominantly of saturated and unsaturated hydrocarbons having carbon numbers predominantly in the range of C3 through C6 and boiling in the range of approximately -20°C to 100°C (-4°F to 212°F).	068783-66-4
649-375-00-8	A complex combination of hydrocarbons separated and/or condensed from natural gas during transportation and collected at the wellhead and/or from the production, gathering, transmission, and distribution pipelines in deeps, scrubbers, etc. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C2 through C8.	068919-39-1
649-376-00-3	A complex combination of hydrocarbons produced by stripping the products from the naphtha unifiner. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C2 through C6.	068921-09-5
649-377-00-9	A complex combination of hydrocarbons remaining after removal of aromatic compounds from catalytic reformed light naphtha in a selective absorption process. It consists predominantly of paraffinic and cyclic compounds having carbon numbers predominantly in the range of C5 to C8 and boiling in the range of approximately 66°C to 121°C (151°F to 250°F).	085116-59-2
649-378-00-4	A complex combination of hydrocarbons consisting primarily of paraffins, cycloparaffins, aromatic and olefinic hydrocarbons having carbon numbers predominantly greater than C3 and boiling in the range of 30°C to 260°C (86°F to 500°F).	086290-81-5
649-380-00-5	A complex combination of hydrocarbons obtained as first runnings from the depentanizer column before hydrotreatment of the aromatic charges. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C4 through C6, predominantly pentanes and pentenes, and boiling in the range of approximately 25°C to 40°C (77°F to 104°F).	091995-38-9
649-381-00-0	A complex combination of hydrocarbons obtained by distillation of heat-soaked steam-cracked naphtha. It consists predominantly of hydrocarbons having carbon numbers in the range of C4 through C6, predominantly C5.	091995-41-4
649-382-00-6	A complex combination of hydrocarbons obtained as the extract from the solvent extraction of a catalytically reformed petroleum cut. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C7 through C8 and boiling in the range of approximately 100°C to 200°C (212°F to 392°F).	091995-68-5
649-383-00-1	A complex combination of hydrocarbons obtained by the distillation of hydrodesulfurized and dearomatized light petroleum fractions. It consists predominantly of C7 paraffins and cycloparaffins boiling in a range of approximately 90°C to 100°C (194°F to 212°F).	092045-53-9
649-384-00-7	A complex combination of hydrocarbons obtained by subjecting a petroleum naphtha to a sweetening process to convert mercaptans or to remove acidic impurities. It consists of hydrocarbons having carbon numbers predominantly in the range of C4 through C5, predominantly C5, and boiling in the range of approximately minus 10 to 35°C (14°F to 95°F).	092045-60-8

Index number	EINECS description	CAS Number
649-385-00-2	A complex combination of hydrocarbons obtained by distillation from prehydrogenated cracked naphtha. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C8 through C11 and boiling in the range of approximately 130°C to 205°C (266°F to 401°F).	092045-62-0
649-386-00-8	A complex combination of hydrocarbons obtained from prehydrogenated cracked naphtha after distillative separation of benzene- and toluene containing hydrocarbon cuts and a higher boiling fraction. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C4 through C11 and boiling in the range of approximately 30°C to 205°C (86°F to 401°F).	092045-63-1
649-387-00-3	A complex combination of hydrocarbons obtained by the fractionation of steam cracked naphtha after recovery from a heat soaking process. It consists predominantly of hydrocarbons having a carbon number predominantly in the range of C4 through C6 and boiling in the range of approximately 0°C to 80°C (32°F to 176°F).	092201-97-3
649-388-00-9	A complex combination of hydrocarbons obtained from the distillation of a petroleum feedstock. It consists predominantly of hydrocarbons having carbon numbers of C5 through C7 rich in C6, and boiling in the range of approximately 60°C to 70°C (140°F to 158°F).	093165-19-6
649-389-00-4	A distillation fraction from the hydrogenation of pyrolysis gasoline boiling in the range of approximately 20°C to 200°C (68°F to 392°F).	094114-03-1
649-390-00-X	A complex combination of hydrocarbons obtained by the distillation of polymerized C8 through C12 fraction from steam cracked petroleum distillates. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C8 through C12.	095009-23-7
649-391-00-5	A complex combination of hydrocarbons obtained by the treatment of heavy naphthic solvent petroleum extract with bleaching earth. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C6 through C15 and boiling in the range of approximately 80°C to 180°C (175°F to 356°F).	097926-43-7
649-392-00-0	A complex combination of hydrocarbons obtained by the treatment and distillation of debenzene light steam-cracked petroleum naphtha. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C7 through C12 and boiling in the range of approximately 95°C to 200°C (203°F to 392°F).	098219-46-6
649-393-00-6	A complex combination of hydrocarbons obtained by the treatment and distillation of light steam-cracked petroleum naphtha. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C5 through C6 and boiling in the range of approximately 35°C to 80°C (95°F to 176°F).	098219-47-7
649-394-00-1	A complex combination of hydrocarbons obtained by the distillation of petroleum light fraction, hydrodesulfurized and dearomatized. It consists predominantly of hydrocarbons having carbon numbers in the range of C7 through C9, predominantly C8 paraffins and cycloparaffins, boiling in the range of approximately 120°C to 130°C (248°F to 266°F).	101316-56-7
649-395-00-7	A complex combination of hydrocarbons obtained during the sorptions of toluene from a hydrocarbon fraction from cracked gasoline treated with hydrogen in the presence of a catalyst. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C6 through C8 and boiling in the range of approximately 80°C to 135°C (176°F to 275°F).	101316-66-9

Index number	EINECS description	CAS Number
649-396-00-2	A complex combination of hydrocarbons obtained by fractionation from hydrodesulphurised coker distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C5 to C11 and boiling in the range of approximately 23°C to 196°C (73°F to 385°F).	101316-7671
649-397-00-8	A complex combination of hydrocarbons obtained by subjecting a petroleum naphtha to a sweetening process to convert mercaptans or to remove acidic impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C5 through C8 and boiling in the range of approximately 20°C to 130°C (68°F to 266°F).	101795-01-1
649-398-00-3	A complex combination of hydrocarbons obtained by distillation of steam-cracked naphtha. It consists predominantly of hydrocarbons having carbon numbers in the range of C3 through C6, predominantly C5.	102110-14-5
649-399-00-9	A complex combination of hydrocarbons obtained by distillation of the products from a steam-cracking process. It consists predominantly of hydrocarbons having carbon numbers of C5 and dicyclopentadiene and boiling in the range of approximately 30°C to 170°C (86°F to 338°F).	102110-15-6
649-400-00-2	A complex combination of hydrocarbons obtained by the distillation of the products of steam cracking or similar processes after taking off the very light products resulting in a residue starting with hydrocarbons having carbon numbers greater than C5. It consists predominantly of aromatic hydrocarbons having carbon numbers greater than C5 and boiling above approximately 40°C (104°F).	102110-55-4
649-404-00-4	A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C9 through C16 and boiling in the range of approximately 150°C to 290°C (320°F to 554°F).	008008-20-6
649-405-00-X	A complex combination of hydrocarbons obtained from the distillation of crude oil or natural gasoline. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C9 through C12 and boiling in the range of approximately 140°C to 220°C (284°F to 428°F).	064742-88-7
649-406-00-5	A complex combination of hydrocarbons obtained from the distillation of crude oil or natural gasoline. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C11 through C16 and boiling in the range of approximately 190°C to 290°C (374°F to 554°F).	064742-96-7
649-407-00-0	A complex combination of hydrocarbons obtained as a wide cut hydrocarbon fuel cut from atmospheric distillation and boiling in the range of approximately 70°C to 220°C (158°F to 428°F).	092045-37-9
649-408-00-6	A complex combination of hydrocarbons obtained by the distillation of the products from a steam cracking process. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C7 through C16 and boiling in the range of approximately 90°C to 290°C (190°F to 554°F).	064742-91-2
649-409-00-1	A complex combination of hydrocarbons obtained by distilling cracked stripped steam-cracked distillates. It consists of hydrocarbons having carbon numbers in the range of C8 through C10 and boiling in the range of approximately 129°C to 194°C (264°F to 382°F).	068477-39-4
649-410-00-7	A complex combination of hydrocarbons obtained by distilling cracked stripped steam-cracked distillates. It consists predominantly of aromatic hydrocarbons having carbon numbers in the range of C10 through C12.	068477-40-7

Index number	EINECS description	CAS Number
649-411-00-2	A complex combination of organic compounds obtained by the distillation of products from a steam cracking process. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C8 through C12.	068477-54-3
649-412-00-8	A complex combination of hydrocarbons obtained by fractionation from hydrodesulfurized thermal cracker distillate. It consists predominantly of hydrocarbons predominantly in the range of C8 through C16 and boiling in the range of approximately 120°C to 283°C (284°F to 541°F).	085116-55-8
649-413-00-3	A complex combination of hydrocarbons produced by the distillation of the products from a steam cracking process treated with hydrogen in the presence of a catalyst. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly greater than C10 and boiling in the range of approximately 150°C to 320°C (302°F to 608°F).	090640-98-5
649-414-00-9	A complex combination of hydrocarbons produced by the distillation of the products from a steam cracking process thereafter treated with hydrogen in the presence of a catalyst. It consists predominantly of aromatic hydrocarbons having carbon numbers in the range of C9 through C10 and boiling in the range of approximately 140°C to 200°C (284°F to 392°F)	090641-13-7
649-415-00-4	A complex combination of hydrocarbons obtained by distillation of thermal-cracking heavy tars. It consists predominantly of highly alkylated aromatic hydrocarbons boiling in the range of approximately 100°C to 250°C (212°F to 482°F).	101316-61-4
649-416-00-X	A complex combination of hydrocarbons obtained by distillation of catalytic cracking heavy tars. It consists predominantly of highly alkylated aromatic hydrocarbons boiling in the range of approximately 100°C to 250°C (212°F to 482°F).	101631-13-4
649-417-00-5	A complex combination of hydrocarbons obtained by the distillation of hydrocracked petroleum distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C9 through C16 and boiling in the range of approximately 235°C to 290°C (455°F to 554°F).	101316-80-7
649-418-00-0	A complex combination of hydrocarbons obtained by distillation of steam cracking heavy tars. It consists predominantly of highly alkylated aromatic hydrocarbons boiling in the range of approximately 100°C to 250°C (212°F to 482°F).	101631-15-6
649-419-00-6	A complex combination of hydrocarbons produced by distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers from C3 through C8. It consists of predominantly branched chain saturated hydrocarbons having carbon numbers predominantly in the range of C11 through C17 and boiling in the range of approximately 205°C to 320°C (401°F to 608°F).	064741-73-7
649-420-00-1	A complex combination of hydrocarbons obtained as the extract from a solvent extraction process. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C7 through C12 and boiling in the range of approximately 90°C to 220°C (194°F to 428°F).	064741-98-6
649-421-00-7	A complex combination of hydrocarbons produced by a treating process to remove acidic materials. It consists of hydrocarbons having carbon numbers predominantly in the range of C9 through C16 and boiling in the range of approximately 150°C to 290°C (302°F to 554°F).	064742-31-0

Index number	EINECS description	CAS Number
649-422-00-2	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly in the range of C9 through C 16 and boiling in the range of approximately 150°C to 290°C (302°F to 554°F).	064742-47-8
649-423-00-8	A complex combination of hydrocarbons obtained from a petroleum stock by treating with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists of hydrocarbons having carbon numbers predominantly in the range of C9 through C 16 and boiling in the range of approximately 150°C to 290°C (302°F to 554°F).	064742-81-0
649-424-00-3	A complex combination of hydrocarbons obtained from distillation of aromatic streams. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C9 through C16 and boiling in the range of approximately 150°C to 290°C (302°F to 554°F).	064742-94-5
649-425-00-9	A complex combination of hydrocarbons from the distillation of products from a fluid coker. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C6 through C15 and boiling in the range of approximately 157°C to 288°C (315°F to 550°F).	068333-23-3
649-426-00-4	A complex combination of hydrocarbons produced by fractionation from catalytically reformed hydrodesulfurized naphtha. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C7 through C13 and boiling in the range of approximately 98°C to 218°C (208°F to 424°F).	085116-57-0
649-427-00-X	A complex combination of hydrocarbons obtained by subjecting a petroleum distillate to a sweetening process to convert mercaptans or to remove acidic impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range C9 through C 16 and boiling in the range of 130°C to 290°C (266°F to 554°F).	091770-15-9
649-428-00-5	A complex combination of hydrocarbons obtained from a petroleum stock by solvent refining and sweetening and boiling in the range approximately 150°C to 260°C (302°F to 500°F).	092045-36-8
649-429-00-0	A complex combination of hydrocarbons obtained as solvents which have been subjected to hydrotreatment in order to convert aromatics to naphthalenes by catalytic hydrogenation.	093763-35-0
649-431-00-1	A complex combination of hydrocarbons obtained by fractionation from hydrodesulphurised coker distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C8 through C 16 and boiling in the range of approximately 120°C to 283°C (248°F to 541°F).	101316-58-9
649-432-00-7	A complex combination of hydrocarbons obtained by the catalytic hydrodesulphurization of a petroleum fraction. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C10 through C13 and boiling in the range of approximately 180°C to 240°C (356°F to 464°F).	101316-81-8
649-433-00-2	A complex combination of hydrocarbons obtained by the catalytic hydrodesulfurization of a petroleum fraction. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range C 10 through C13 and boiling in the range of approximately 175°C to 220°C (347°F to 428°F).	101316-82-9
649-434-00-8	A complex combination of hydrocarbons obtained from the distillation of petroleum and subsequent hydrotreatment. It consists predominantly of alkanes, cycloalkanes and alkylbenzenes, having carbon numbers predominantly in the range of C12 through C16 and boiling in the range of 230°C to 270°C (446°F to 512°F).	101631-19-0

Index number	EINECS description	CAS Number
649-435-00-3	A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly in the range C9 through C25 and boiling in the range of approximately 150°C to 400°C (302°F to 752°F). It contains a relatively large proportion of bicyclic aromatic hydrocarbons.	064741-59-9
649-436-00-9	A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly in the range of C11 through C30 and boiling in the range of approximately 205°C to 450°C (401°F to 842°F). It contains a relatively large proportion of tricyclic aromatic hydrocarbons.	064741-60-2
649-437-00-4	A complex combination of hydrocarbons from distillation of the products from a hydrocracking process. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range C 10 through C 18 ,and boiling in the range of approximately 160°C to 320°C (320°F to 608°F).	064741-77-1
649-438-00-X	A complex combination of hydrocarbons from the distillation of the products from a thermal cracking process. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range C 10 through C22 and boiling in the range of approximately 160°C to 370°C (320°F to 698°F).	064741-82-8
649-439-00-5	A complex combination of hydrocarbons obtained by treating light catalytic cracked distillates with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists of hydrocarbons having carbon numbers predominantly in the range C9 through C25 and boiling in the range of approximately 150°C to 400°C (302°F to 752°F). It contains a, relatively high proportion of bicyclic aromatic hydrocarbons.	068333-25-5
649-440-00-0	A complex combination of hydrocarbons from the multiple distillation of products from a steam cracking process. It consists of hydrocarbons having carbon numbers predominantly in the range C 10 through C 18.	068475-80-9
649-441-00-6	A complex combination of hydrocarbons obtained by distilling cracked steam cracked distillate and or it's fractionation products. It consists of hydrocarbons having carbon numbers predominantly in the range C10 to low molecular weight polymers.	068477-38-3
649-442-00-1	A complex combination of hydrocarbons produced by distillation of the products from a steam cracking process. It consists of hydrocarbons having carbon numbers predominantly greater than C9 and boiling in the range of approximately 205°C to 400°C (400°F to 752°F).	068527-18-4
649-443-00-7	A complex combination of hydrocarbons obtained by fractionation from hydrodesulfurized thermal cracker distillate stocks. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range C11 to C25 and boiling in the range of approximately 205°C to 400°C (401°F to 752°F).	085116-53-6
649-445-00-8	A complex combination of hydrocarbons obtained as a residual fraction from the distillation of hydrotreated steam-cracked naphtha. It consists predominantly of hydrocarbons boiling in the range of approximately 200°C to 350°C (392°F to 662°F).	092062-00-5
649-446-00-3	A complex combination of hydrocarbons obtained as a column bottom from the separation of effluents from steam cracking naphtha at a high temperature. It boils in the range of approximately 147°C to 300°C (297°F to 572°F) and produces a finished oil having a viscosity of l8cSt at 50°C.	092062-04-9

Index number	EINECS description	CAS Number
649-447-00-9	A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process which has been used as a heat transfer fluid. It consists predominantly of hydrocarbons boiling in the range of approximately 190°C to 340°C (374°F to 644°F). The stream is likely to contain organic sulfur compounds.	092201-60-0
649-448-00-4	A complex combination of hydrocarbons obtained as residue from the distillation of steam cracked heat soaked naphtha and boiling in the range of approximately 150°C to 350°C (302°F to 662°F).	093763-85-0
649-449-00-X	A complex combination of hydrocarbons obtained by solvent dewaxing of a distillation residue from a hydrocracked paraffinic distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of approximately 360°C to 500°C (680°F to 932°F). It produces a finished oil having a viscosity of 4.5cSt at approximately 100°C (212°F).	097675-88-2
649-450-00-5	A complex combination of hydrocarbons obtained by catalytic dehydrosulfurization of thermal cracked light vacuum petroleum. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C14 through C20 and boiling in the range of approximately 270°C to 370°C (518°F to 698°F).	097926-59-5
649-451-00-0	A complex combination of hydrocarbons by fractionation from hydrodesulfurized coker distillate stocks. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C12 through C21 and boiling in the range of approximately 200°C to 360°C (392°F to 680°F).	101316-59-0
649-452-00-6	A complex combination of hydrocarbons obtained by the distillation of steam cracking heavy residues. It consists predominantly of highly alkylated heavy aromatic hydrocarbons boiling in the range of approximately 250°C to 400°C (482°F to 752°F).	101631 -14-5
649-453-00-1	A complex combination of hydrocarbons from the distillation of the products from a hydrocracking process. It consists predominantly of saturated hydrocarbons having carbon numbers in the range C15 to C39 and boiling in the range of approximately 260°C to 600°C (500°F to 1112°F).	064741-76-0
649-454-00-7	A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction process. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F (19cSt at 40°C).	064741-88-4
649-455-00-2	A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction process. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C).	064741-89-5
649-456-00-8	A complex combination of hydrocarbons obtained as the solvent soluble fraction from C3 to C4 solvent deasphalting of a residuum. It consists of hydrocarbons having carbon numbers predominantly higher than C25 and boiling above approximately 400°C (752°F).	064741-95-3
649-457-00-3	A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction process. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064741-96-4

Index number	EINECS description	CAS Number
649-458-00-9	A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction process. It consists of hydrocarbons having carbon numbers predominantly in the range of C 15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064741-97-5
649-459-00-4	A complex combination of hydrocarbons obtained as the solvent insoluble fraction from solvent refining of a residuum using a polar organic solvent such as phenol or furfural. It consists of hydrocarbons having carbon numbers predominantly higher than C25 and boiling above approximately 400°C (752°F).	064742-01-4
649-460-00-X	A complex combination of hydrocarbons resulting from treatment of a petroleum fraction with natural or modified clay in either a contacting or percolation process to remove trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F (19cSt at 40°C). It contains a relatively large proportion of saturated hydrocarbons.	064742-36-5
649-461-00-5	A complex combination of hydrocarbons resulting from treatment of a petroleum fraction with natural or modified clay in either a contacting or percolation process to remove trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains a relatively large proportion of saturated hydrocarbons.	064742-37-6
649-462-00-0	A complex combination of hydrocarbons obtained by the treatment of a residual oil with a natural or modified clay in either a contacting or percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly higher than C25 and boiling above approximately 400°C (752°F).	064742-41-2
649-463-00-6	A complex combination of hydrocarbons resulting 60m treatment of a petroleum fraction with natural or modified clay in either a contacting or percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-44-5
649-464-00-1	A complex combination of hydrocarbons resulting from treatment of a petroleum fraction with natural or modified clay in either a contacting or percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range C15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-45-6
649-465-00-7	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil of at least 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-52-5
649-466-00-2	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly in the range C 15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-53-6

Index number	EINECS description	CAS Number
649-467-00-8	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil of at least 100 SUS at 100°F (19cSt at 40°C). It contains a relatively large proportion of saturated hydrocarbons.	064742-54-7
649-468-00-3	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly in the range of C 15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains a relatively large proportion of saturated hydrocarbons.	064742-55-8
649-469-00-9	A complex combination of hydrocarbons obtained by the removal of normal paraffins from a petroleum fraction by solvent crystallization. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C).	064742-56-9
649-470-00-4	A complex Combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst. It consists of hydrocarbons having carbon numbers predominantly greater than C25 and boiling above approximately 400°C (752°F).	064742-57-0
649-471-00-X	A complex combination of hydrocarbons obtained by removal of long, branched chain hydrocarbons from a residual oil by solvent crystallization. It consists of hydrocarbons having carbon numbers predominantly greater than C25 and boiling above 400°C (752°F).	064742-62-7
649-472-00-5	A complex combination of hydrocarbon obtained by removal of normal paraffins from a petroleum fraction by solvent crystallization. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil of not less than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-63-8
649-473-00-0	A complex combination of hydrocarbons obtained by removal of normal paraffins from a petroleum fraction by solvent crystallization. It consists of hydrocarbons having carbon numbers predominantly in the range C 15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (I9cSt at 400C). It contains relatively few normal paraffins.	064742-64-9
649-474-00-6	A complex combination of hydrocarbons obtained by the removal of normal paraffins from a petroleum fraction by solvent crystallization. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity not less than 100 SUS at 100°F (19cSt at 400C).	064742-65-0
649-475-00-1	A complex combination of hydrocarbons obtained from a catalytic dewaxing process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-68-3
649-476-00-7	A complex combination of hydrocarbons obtained from a catalytic dewaxing process. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity less than 100 SUS at 100°F (I9cSt at 40°C). It contains relatively few normal paraffins.	064742-69-4
649-477-00-2	A complex combination of hydrocarbons obtained from a catalytic dewaxing process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of at least 100 SUS at 100°F (19cSt at 40°C).	064742-70-7

Index number	EINECS description	CAS Number
649-478-00-8	A complex combination of hydrocarbons obtained from a catalytic dewaxing process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C).	064742-71-8
649-479-00-3	A complex combination of hydrocarbons obtained by removing straight chain paraffin hydrocarbons as a solid by treatment with an agent such as urea. It consists of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil having a viscosity of at least 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-75-2
649-480-00-9	A complex combination of hydrocarbons obtained from a catalytic dewaxing process. It consists of hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil having a viscosity less than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	064742-76-3
649-481-00-4	A complex combination of hydrocarbons obtained by treating light vacuum gas oil, heavy vacuum gas oil, and solvent deasphalted residual oil with hydrogen in the presence of a catalyst in a two stage process with dewaxing being carried out between the two stages. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil having a viscosity of approximately 112cSt at 40°C. It contains a relatively large proportion of saturated hydrocarbons.	072623-85-9
649-482-00-X	A complex combination of hydrocarbons obtained by treating light vacuum gas oil and heavy vacuum gas oil with hydrogen in the presence of a catalyst in a two stage process with dewaxing being carried out between two stages. It consists predominantly of hydrocarbons having carbon numbers in the range C15 through C30 and produces a finished oil having a viscosity of approximately 15cSt at 40°C. It contains a relatively large proportion of saturated hydrocarbons.	072623-86-0
649-483-00-5	A complex combination of hydrocarbons obtained by treating light vacuum gas oil, heavy vacuum gas oil, and solvent deasphalted residual oil with hydrogen in the presence of a catalyst in a two stage process with dewaxing being carried out between the two stages. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of approximately 32cSt at 40°C. It contains a relatively large proportion of saturated hydrocarbons.	072623-87-1
649-484-00-0	A complex combination of hydrocarbons obtained from solvent extraction and dewaxing process. It consists predominantly of saturated hydrocarbons having carbon numbers in the range C15 through C50.	074869-22-0
649-485-00-6	A complex combination of hydrocarbons obtained by dewaxing heavy paraffinic distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil with a viscosity of equal to or greater than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	090640-91-8
649-486-00-1	A complex combination of hydrocarbons obtained by dewaxing light paraffinic distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C12 through C30 and produces a finished oil with a viscosity of less than 100 SUS at 100°F (19cSt at 40°C). It contains relatively few normal paraffins.	090640-92-9
649-487-00-7	A complex combination of hydrocarbons obtained by treating dewaxed heavy paraffinic distillate with neutral or modified clay in either a contacting or percolation process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C20 through C50.	090640-94-1

Index number	EINECS description	CAS Number
649-488-00-2	A complex combination of hydrocarbons produced by treating dewaxed heavy paraffinic distillate with hydrogen in the presence of a catalyst. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range C20 through C50.	090640-95-2
649-489-00-8	A complex combination of hydrocarbons resulting from treatment of dewaxed light paraffinic distillate with natural or modified clay in either a contacting or percolation process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 15 through C30.	090640-96-3
649-490-00-3	A complex combination of hydrocarbons produced by treating a dewaxed light paraffinic distillate with hydrogen in the presence of a catalyst. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C15 through C30.	090640-97-4
649-493-00-X	A complex combination of hydrocarbons obtained from an intensive treatment of dewaxed distillate by hydrogenation in the presence of a catalyst. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C25 through C39 and produces a finished oil with a viscosity of approximately 44cSt at 50°C.	091995-39-0
649-494-00-5	A complex combination of hydrocarbons obtained from an intensive treatment of dewaxed distillate by hydrogenation in the presence of a catalyst. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of C21 through C29 and produces a finished oil with a viscosity of approximately 13cSt at 50°C.	091995-40-3
649-495-00-0	A complex combination of liquid hydrocarbons obtained by recrystallization of dewaxed hydrocracked solvent-refined petroleum distillates.	091555-45-8
649-496-00-6	A complex combination of hydrocarbons obtained by treating a petroleum fraction with hydrogen in the presence of a catalyst and removing the aromatic hydrocarbons by solvent extraction. It consists predominantly of naphthenic hydrocarbons having carbon numbers predominantly in the range of C15 through C30 and produces a finished oil with a viscosity of between 13-15cSt at 40°C.	091955-54-9
649-499-00-2	A complex combination of hydrocarbons produced by solvent removal of paraffins from the residue of the distillation of acid-treated, hydrocracked heavy paraffins and boiling approximately above 380°C (716°F).	092061-86-4
649-500-00-6	A complex combination of hydrocarbons obtained from sulfur containing paraffinic crude oil. It consists predominantly of a solvent refined deparaffined lubricating oil with a viscosity of 65cSt at 50°C.	092129-09-4
649-501-00-1	A complex combination of hydrocarbons obtained by refining of crude oil. It consists predominantly of aromatics, naphthenics and paraffinics and produces a finished oil with a viscosity of 120 SUS at 100°F (23cSt at 40°C).	093572-43-1
649-505-00-3	A complex combination of hydrocarbons obtained by the solvent dearomatization of the residue of hydrocracked petroleum. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 18 through C27 and boiling in the range of approximately 370°C to 450°C (698°F to 842°F).	094733-09-2
649-506-00-9	A complex combination of hydrocarbons obtained by solvent deparaffination of the distillation residue from hydrocracked petroleum. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C18 through C40 and boiling in the range of approximately 370°C to 550°C (698°F to 1022°F).	094733-15-0

Index number	EINECS description	CAS Number
649-507-00-4	A complex combination of hydrocarbons obtained by solvent deparaffination of the hydrogenated raffinate obtained by solvent extraction of a hydrotreated petroleum distillate. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C18 through C40 and boiling in the range of approximately 370°C to 550°C (698°F to 1022°F).	094733-16-1
649-512-00-1	A complex combination of hydrocarbons obtained by the solvent treatment of a distillate from hydrocracked petroleum distillates. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C18 through C27 and boiling in the range of approximately 370°C to 450°C (698°F to 842°F).	097488-73-8
649-513-00-7	A complex combination of hydrocarbons obtained by the treatment of a hydrogenated petroleum distillate with a solvent. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 19 through C40 and boiling in the range of approximately 390°C to 550°C (734°F to 1022°F).	097488-74-9
649-515-00-8	A complex combination of hydrocarbons obtained as first runnings from the vacuum distillation of effluents from the treatment of a solvent-deasphalting short residue with hydrogen in the presence of a catalyst. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C17 through C30 and boiling in the range of approximately 300°C to 400°C (572°F to 752°F). It produces a finished oil having a viscosity of 4cSt at approximately 100°C (212°F).	097675-87-1
649-516-00-3	A complex combination of hydrocarbons obtained as first runnings from vacuum distillation of effluents from the catalytic hydrotreatment of a solvent deasphalting short residue having a viscosity of 8cSt at approximately 100°C (212°F). It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 17 through C40 and boiling in the range of approximately 300°C to 500°C (592°F to 932°F).	097722-06-0
649-517-00-9	A complex combination of hydrocarbons obtained by the extraction of the aromatics from a light naphthenic distillate having a viscosity of 9.5cSt at 40°C (104°F). It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C13 through C27 and boiling in the range of approximately 240°C to 400°C (464°F to 752°F).	097722-09-3
649-518-00-4	A complex combination of hydrocarbons obtained by extraction of the aromatics from a light naphthenic distillate having a viscosity of 16cSt at 40°C (104°F). It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 14 through C29 and boiling in the range of approximately 250°C to 425°C (482°F to 797°F).	097722-10-6
649-525-00-2	A complex combination of hydrocarbons obtained by the treatment of solvent-dewaxed petroleum residual oils with activated charcoal for the removal of trace polar constituents and impurities.	100684-37-5
649-526-00-8	A complex combination of hydrocarbons obtained by treatment of solvent dewaxed petroleum residual oils with bleaching earth for the removal of trace polar constituents and impurities.	100684-38-6
649-527-00-3	A complex combination of hydrocarbons obtained by solvent extraction and hydrogenation of vacuum distillation residues. It consists predominantly of hydrocarbons having carbon numbers predominantly greater than C25 and produces a finished oil with a viscosity in the order of 32cSt to 37cSt at 100°C (212°F).	101316-69-2
649-528-00-9	A complex combination of hydrocarbons obtained by solvent extraction and hydrogenation of atmospheric distillation residues. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 17 through C32 and produces a finished oil with a viscosity in the order of 17cSt to 23cSt at 40°C (104°F).	101316-70-5

Index number	EINECS description	CAS Number
649-529-00-4	A complex combination of hydrocarbons obtained by solvent extraction and hydrogenation of atmospheric distillation residues. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C20 through C35 and produces a finished oil with a viscosity in the order of 37cSt to 44cSt at 40°C (104°F).	101316-71-6
649-530-00-X	A complex combination of hydrocarbons obtained by solvent extraction and hydrogenation of atmospheric distillation residues. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C24 through CSO and produces a finished oil with a viscosity in the order of 16cSt to 75cSt at 40°C (104°F).	101316-72-7
649-531-00-5	An aromatic concentrate produced by adding water to heavy naphthenic distillate solvent extract and extraction solvent.	068783-00-6
649-532-00-0	A complex combination of hydrocarbons obtained as the extract from the re-extraction of solvent-refined heavy paraffinic distillate. It consists of saturated and aromatic hydrocarbons having carbon numbers predominantly in the range of C20 through C50	068783-04-0
649-533-00-6	A complex combination of hydrocarbons obtained as the extract from a solvent extraction of heavy paraffinic distillate.	068814-89-1
649-534-00-1	A complex combination of hydrocarbons obtained by treating a heavy naphthenic distillate solvent extract with hydrogen in the presence of a catalyst. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C20 through C50 and produces a finished oil of at least 19cSt at 40°C (100 SUS at 100°F).	090641-07-9
649-535-00-7	A complex combination of hydrocarbons produced by treating a heavy paraffinic distillate solvent extract with hydrogen in the presence of a catalyst. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C21 through C33 and boiling in the range of approximately 350°C to 480°C (662°F to 896°F).	090641-08-0
649-536-00-2	A complex combination of hydrocarbons produced by treating a light paraffinic distillate solvent extract with hydrogen in the presence of a catalyst. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 17 through C26 and boiling in the range of approximately 280°C to 400°C (536°F to 752°F).	090641-09-1
649-537-00-8	A complex combination of hydrocarbons obtained as the extract from solvent extraction of intermediate paraffinic top solvent distillate that is treated with hydrogen in the presence of a catalyst. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C16 through C36.	091995-73-2
649-538-00-3	A complex combination of hydrocarbons obtained by treating the extract, obtained from a solvent extraction process, with hydrogen in the presence of a catalyst under conditions primarily to remove sulfur compounds. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C 15 through C30. This stream is likely to contain 5 wt.% or more of 4- to 6-membered condensed ring aromatic hydrocarbons.	091995-75-4
649-539-00-9	A complex combination of hydrocarbons obtained as a fraction of the distillation of an extract from the solvent extraction of light paraffinic top petroleum distillates that is subjected to a sulfuric acid refining. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range C 16 through C32.	091995-76-5

index number	EINECS description	CAS Number
649-540-00-4	A complex combination of hydrocarbons obtained by solvent extraction of a light paraffin distillate and treated with hydrogen to convert the organic sulfur to hydrogen sulfide which is eliminated. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C 15 through C40 and produces a finished oil with a viscosity of greater than 10cSt at 40°C.	091995-77-6
649-541-00-X	A complex combination of hydrocarbons, obtained by solvent extraction from light vacuum petroleum gas oils and treated with hydrogen in the presence of a catalyst. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C13 through C30.	091955-79-8
649-542-00-5	A complex combination of hydrocarbons resulting from treatment of a petroleum fraction with natural or modified clay in either a contact or percolation process to remove the trace amounts of polar compounds and impurities present. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C20 through CSO. This stream is likely to contain 5 wt. % or more 4-6 membered ring aromatic hydrocarbons.	092 704 - 08 -0
649-543-00-0	A complex combination of hydrocarbons obtained from petroleum stock by treating with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists predominantly in the range of C 15 through C50 and produces a finished oil with a viscosity of greater than 19cSt at 40°C.	093763-10-1
649-544-00-6	A complex combination of hydrocarbons obtained from a solvent dewaxed petroleum stock by treating with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists predominantly of hydrocarbons having carbon numbers in the range of C 15 through C50 and produces a finished oil with a viscosity of greater than 19cSt at 40°C.	093763-11-2
649-545-00-1	A complex combination of hydrocarbons obtained as a fraction from distillation of an extract recovered by solvent extraction of light paraffinic top petroleum distillate treated with activated charcoal to remove traces of polar constituents and impurities. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C16 through C32.	100684-02-4
649-546-00-7	A complex combination of hydrocarbons obtained as a fraction from distillation of an extract recovered by solvent extraction of light paraffinic top petroleum distillates treated with bleaching earth to remove traces of polar constituents and impurities. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C 16 through C32.	100684-03-5
649-547-00-2	A complex combination of hydrocarbons obtained by solvent extraction of light vacuum petroleum gas oil treated with activated charcoal for the removal of trace polar constituents and impurities. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range C 13 through C30.	100684-04-6
649-548-00-8	A complex combination of hydrocarbons obtained by solvent extraction of light vacuum petroleum gas oils treated with bleaching earth for the removal of trace polar constituents and impurities. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of C 13 through C30.	100684-05-7
649-549-00-3	A complex combination of hydrocarbons obtained as the oil fraction from a solvent deoiling or a wax sweating process. It consists predominantly of branched chain hydrocarbons having carbon numbers predominantly in the range of C20 through C50.	064742-67-2

index number	EINECS description	CAS Number
650-002-00-6	Any of the volatile predominately terpenic fractions or distillates resulting from the solvent extraction of, gum collection from, or pulping of softwoods. Composed primarily of the C10H16 terpene hydrocarbons: alpha-pinene, beta-pinene, limonene, 3-carene, camphene. May contain other acrylic, monocyclic, or bicyclic terpenes, oxygenated terpenes, and anethole. Exact composition varies with refining methods and the age, location, and species of the softwood source.	008006-64-2
650-016-00-2	Machine-made {or, as given in Directive 97/69/EC, man-made} vitreous (silicate) fibres with random orientation with alkaline oxide and alkaline earth oxide Na ₂ O + K ₂ O + CaO + MgO + BaO) content greater than 18% by weight.	
650-017-00-8	Machine-made {or, as given in Directive 97/69/EC, man-made} vitreous (silicate) fibres with random orientation with alkaline oxide and alkaline earth oxide Na ₂ O + K ₂ O + CaO + MgO + BaO) content less or equal to 18% by weight.

Part IV Information for classification of pesticides

The following LD50 values should be taken into consideration when applying the formula set out in Schedule 4.2(3) of CHIP.

The information is given in the following format:

substance conventional values of oral LD50 mg/kg

Acephate	945	Chlordimeform	340
Alachlor	1200	Chlorfenac	575
Allethrin	920	Chlorfenethol	930
Allidochlor	700	Chlorfenprop-methyl	1190
Aluminium phosphide ¹	0.4	Chlorfenvinphos	10
Ametryne	1405	Chlorophacinone	2
Amidithion	600	Chlorphonium	178
2-aminobutane	380	Chlorpyrifos	135
Aminocarb	50	Chlorthiamid	757
Aminotriazole	2000	Coumachlor	900
Ammonium polysulphides ²		Coumaphos	16
Antu	2	Coumatetralyl	17
Azinphos-ethyl	12	Coumithoate	67
Azinphos-methyl	16	Crimidine	1.25
Barban	1300	Crotoxyphos	74
Barium carbonate	650	Crufomate	770
Barium polysulphides ²		Cyanazine	182
Bensulide	770	Cyanophos	610
Bentazone	1100	Cyanthoate	3.2
Benzthiazuron	1280	Cycloheximide	2
Binapacryl	421	Cyhexatin	540
Bromofenoxim	1217	2,4-D	375
Bromophos	1600	Dazomet	640
Bromophos-ethyl	71	2,4-DB	700
Bromoxynil	190	DDT	113
Calcium polysulphides ²		Demeton-O	1.7
Camphechlor	80	Demeton-O-methyl	180
Carbaryl	300	Demeton-S	1.7
Carbofuran	8	Demeton-S-methyl	40
Carbon disulphide ¹	0.4	Demeton-S-methyl sulphone	37
Carbophenothion	32	Desmetryne	1390
Chlordane	460	Dialifos	5
Chlordecone	114	Diallate	395

Diazinon	300	Fenchlorphos	1740
1,2-dibromo-3-chloropropane	170	Fenitrothion	503
1,2-dibromoethane ¹	0.4	Fenoprop	650
Dichlofenthion	270	Fensulfothion	3.5
Dichlofluanid ²		Fenthion	190
Dichlone	1300	Fentin acetate	125
1,2-dichloroethane	670	Fentin hydroxide	108
Dichlorprop	800	Fluoracetamide.	13
Dichlorvos	56	Fonofos	8
Dicofol	690	Formothion	365
Dicrotophos	22	Heptachlor	100
Dimefox	1	Heptachlor epoxide	34
Dimetan	120	hexachloroacetone	1550
Dimethoate	425	8-hydroxyquinoline sulphate	1200
Dimetilan	47	Ioxynil	110
Dinobuton	140	Ioxynil-octanoate	390
Dinocap	980	Isolan	11
Dinoseb	58	Kelevan	240
Salts and esters of dinoseb	60	Lindane	88
Dinoterb	25	Malathion containing 1.8% isomalathion or less	2000
Salts and esters of dinoterb	25	Malathion containing more than 1.8% isomalathion	885
Dioxacarb	90	MCPA	700
Dioxathion	23	Salts and esters of MCPA	700
Diphenamid	970	MCPB	680
Disulfoton	2.6	Salts and esters of MCPB	680
Dithianon	640	Mecarbam	36
DNOC	25	Mecoprop	930
Dodine	1000	Mephosfolan	9
Drazoxolon	126	Mercurous chloride	210
Endosulfan	80	Metaldehyde	630
Endothal-sodium	51	Methamidophos	7.5
Endothion	30	Methidathion	25
Endrin	7	Methiocarb	35
EPN	14	Methomyl	17
EPTC	1652	Methyl isothiocyanate	175
Erbon	1120	Molinate	720
Ethion	161	Monocrotophos	14
Ethoate-methyl	340	Monolinuron	1800
Fenaminosulf	60	Monuron	480
Fenazaflor	283	Morfamquat	325

Nabam	395	Tridemorph	650
Naled	430	Trifenmorph	1400
Norbormide	4.4	Vamidothion	103
Omethoate	50	Warfarin	3
Parathion	2	Zinc phosphide ¹	0.4
Parathion-methyl	6	Ziram	1400
Pebulate	1120	Notes	
pentachlorophenol	27	1	Not determined experimentally
Phenthoate	400	2	Conventional LD50 values have not been given to these substances because of their corrosive/irritant properties
Phorate	2		
Phosmet	230		
Phosphamidon	17		
Phospholan	9		
Phoxim	1845		
Pirimiphos-ethyl	140		
Potassium polysulphides ²			
Promecarb	74		
Promurit	0.28		
Propanil	1400		
Propargite	1500		
2-propenal (Acrolein)	46		
2-propen-1-ol	64		
Propoxur	95		
Prothoate	8		
Schradan	9		
Sodium polysulphides ²			
Strychnine	5		
Sulfallate	850		
Sulfotep	5		
2,4,5-T	500		
Salts and esters of 2,4,5-T	500		
2,3,6-TBA	1500		
TEPP	1.1		
tetrachloromethane ¹	0.4		
Thiometon	120		
Thiram	560		
Triallate	1700		
Triamiphos	20		
Trichloronate	16		
Trichlorphon	560		

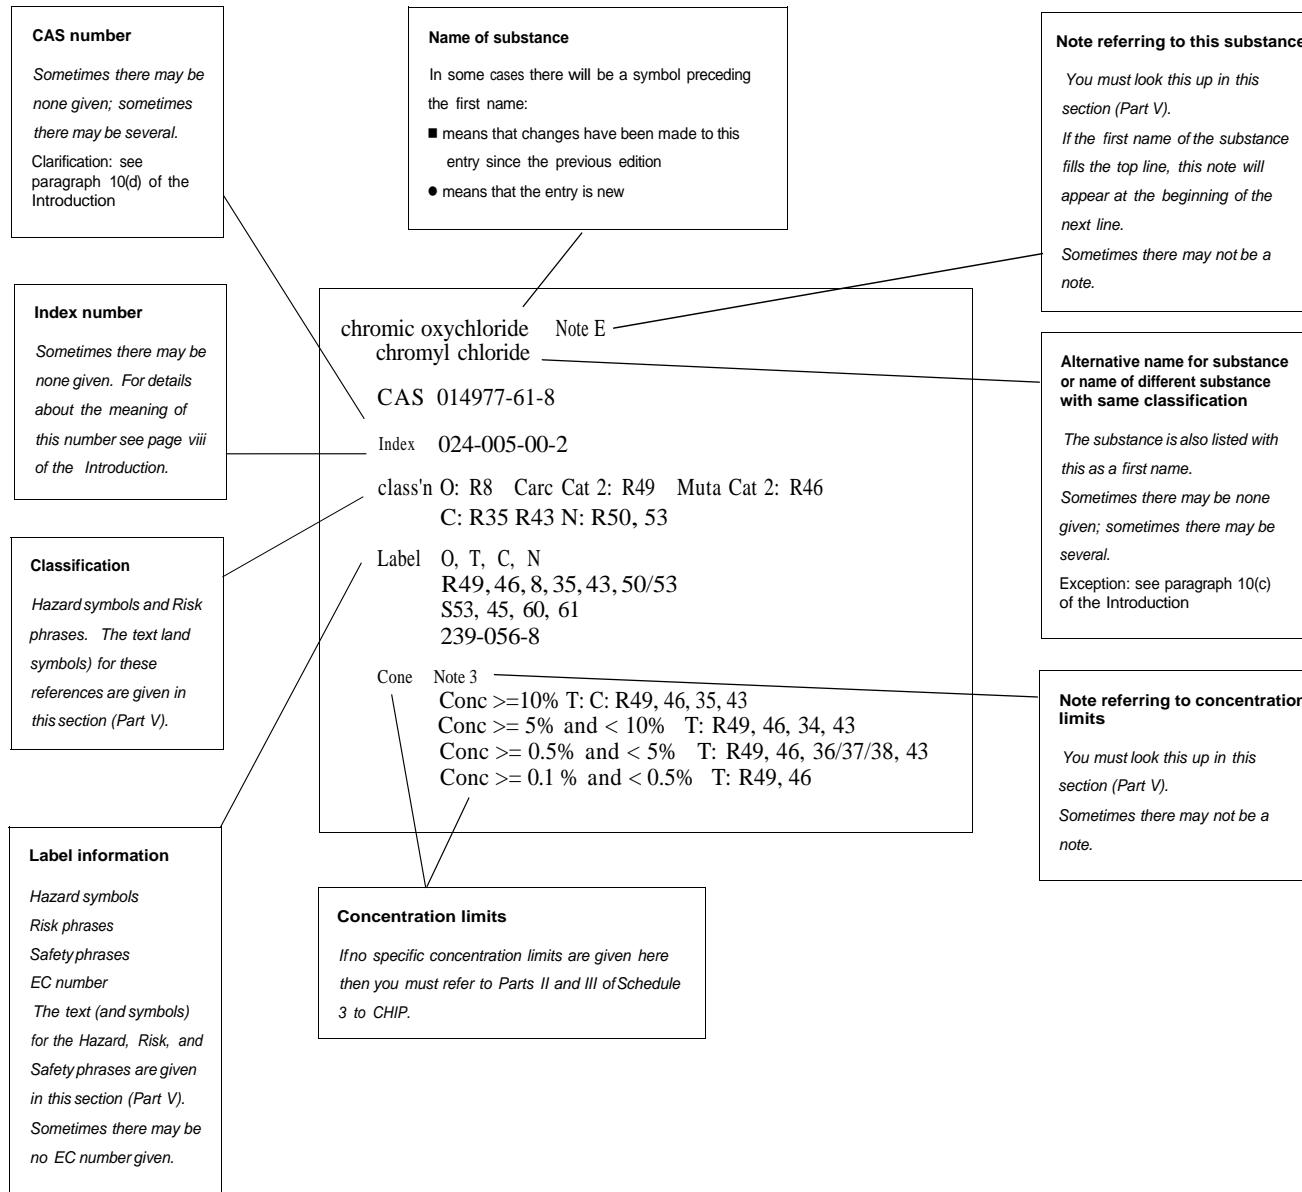

Part V Sample entry, risk and safety phrases, hazard symbols and explanation of notes

Part V Sample entry, risk and safety phrases, hazard symbols and explanation of notes

Given on the following pages are the risk and safety phrases referred to by number in the entries in Part I 'Alphabetic listing, classification and labelling information'. Also given are hazard symbols, and the explanation of notes to entries in Part I.

For details of how to use the Approved Supply List, including alphabetic listing conventions, refer to the Introduction,

Shown below is a sample entry from Part I, explaining the structure of an entry.

Risk phrases

Indication of particular risks		29	Contact with water liberates toxic gas
1 Explosive when dry		30	Can become highly flammable in use
2 Risk of explosion by shock, friction, fire or other sources of ignition		31	Contact with acids liberates toxic gas
3 Extreme risk of explosion by shock, friction, fire or other sources of ignition		32	Contact with acids liberates very toxic gas
4 Forms very sensitive explosive metallic compounds		33	Danger of cumulative effects
5 Heating may cause an explosion		34	Causes burns
6 Explosive with or without contact with air		35	Causes severe burns
7 May cause fire		36	Irritating to eyes
8 Contact with combustible material may cause fire		37	Irritating to respiratory system
9 Explosive when mixed with combustible material		38	Irritating to skin
10 Flammable		39	Danger of very serious irreversible effects
11 Highly flammable		40	Limited evidence of a carcinogenic effect
12 Extremely flammable		41	Risk of serious damage to eyes
14 Reacts violently with water		42	May cause sensitisation by inhalation
15 Contact with water liberates extremely flammable gases		43	May cause sensitisation by skin contact
16 Explosive when mixed with oxidising substances		44	Risk of explosion if heated under confinement
17 Spontaneously flammable in air		45	May cause cancer
18 In use may form flammable/explosive vapour-air mixture		46	May cause heritable genetic damage
19 May form explosive peroxides		48	Danger of serious damage to health by prolonged exposure
20 Harmful by inhalation		49	May cause cancer by inhalation
21 Harmful in contact with skin		50	Very toxic to aquatic organisms
22 Harmful if swallowed		51	Toxic to aquatic organisms
23 Toxic by inhalation		52	Harmful to aquatic organisms
24 Toxic in contact with skin		53	May cause long-term adverse effects in the aquatic environment
25 Toxic if swallowed		54	Toxic to flora
26 Very toxic by inhalation		55	Toxic to fauna
27 Very toxic in contact with skin		56	Toxic to soil organisms
28 Very toxic if swallowed		57	Toxic to bees
		58	May cause long-term adverse effects in the environment

59	Dangerous for the ozone layer	36/38	Irritating to eyes and skin
60	May impair fertility	37/38	Irritating to respiratory system and skin
61	May cause harm to the unborn child	39/23	Toxic: danger of very serious irreversible effects through inhalation
62	Possible risk of impaired fertility	39/23/24	Toxic: danger of very serious irreversible effects through inhalation and in contact with skin
63	Possible risk of harm to the unborn child	39/23/24/25	Toxic: danger of very serious irreversible effects through inhalation, in contact with skin and if swallowed
64	May cause harm to breastfed babies	39/23/24/25	Toxic: danger of very serious irreversible effects through inhalation and if swallowed
65	Harmful: may cause lung damage if swallowed	39/23/25	Toxic: danger of very serious irreversible effects in contact with skin
66	Repeated exposure may cause skin dryness or cracking	39/24	Toxic: danger of very serious irreversible effects in contact with skin and if swallowed
67	Vapours may cause drowsiness and dizziness	39/24/25	Toxic: danger of very serious irreversible effects through inhalation and if swallowed
68	Possible risk of irreversible effects	39/25	Toxic: danger of very serious irreversible effects if swallowed
Combination of particular risks			
14/15	Reacts violently with water, liberating extremely flammable gases	39/26	Very Toxic: danger of very serious irreversible effects through inhalation
20/12	Harmful by inhalation and in contact with skin	39/26/27	Very Toxic: danger of very serious irreversible effects through inhalation and in contact with skin
20/21/22	Harmful by inhalation, in contact with skin and, if swallowed	39/26/27/28	Very Toxic: danger of very serious irreversible effects through inhalation, in contact with skin and if swallowed
20/22	Harmful by inhalation and if swallowed	39/26/28	Very Toxic: danger of very serious irreversible effects through inhalation and if swallowed
21/22	Harmful in contact with skin and if swallowed	39/27	Very Toxic: danger of very serious irreversible effects in contact with skin
23/24	Toxic by inhalation and in contact with skin	39/21/28	Very Toxic: danger of very serious irreversible effects in contact with skin and if swallowed
23/24/25	Toxic by inhalation, in contact with skin and if swallowed	68/20	Harmful: possible risk of irreversible effects through inhalation
23/25	Toxic by inhalation and if swallowed	68/20/21	Harmful: possible risk of irreversible effects through inhalation and in contact with skin
24/25	Toxic in contact with skin and if swallowed	68/20/21/22	Harmful: possible risk of irreversible effects through inhalation, in contact with skin and if swallowed
26/27	Very toxic by inhalation and in contact with skin	68/20/22	Harmful: possible risk of irreversible effects through inhalation and if swallowed
26/27/28	Very toxic by inhalation, in contact with skin and if swallowed		
26/28	Very toxic by inhalation and if swallowed		
27/28	Very toxic in contact with skin and if swallowed		
36/37	Irritating to eyes and respiratory system		
36/37/38	Irritating to eyes, respiratory system and skin		

68/21	Harmful: possible risk of irreversible effects in contact with skin	51/53	Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment
68/21/22	Harmful: possible risk of irreversible effects in contact with skin and if swallowed	52/53	Harmful to aquatic organisms, may cause long-term adverse effects in the aquatic environment
68/22	Harmful: possible risk of irreversible effects if swallowed		
42/43	May cause sensitisation by inhalation and skin contact		
48/20	Harmful: danger of serious damage to health by prolonged exposure through inhalation		
48/20/21	Harmful: danger of serious damage to health by prolonged exposure through inhalation and in contact with skin		
48/20/21/22	Harmful: danger of serious damage to health by prolonged exposure through inhalation, in contact with skin and if swallowed		
48/20/22	Harmful: danger of serious damage to health by prolonged exposure through inhalation and if swallowed		
48/21	Harmful: danger of serious damage to health by prolonged exposure in contact with skin		
48/21/22	Harmful: danger of serious damage to health by prolonged exposure in contact with skin and if swallowed		
48/22	Harmful: danger of serious damage to health by prolonged exposure if swallowed		
48/23	Toxic: danger of serious damage to health by prolonged exposure through inhalation		
48/23/24	Toxic: danger of serious damage to health by prolonged exposure through inhalation and in contact with skin		
48/23/24/25	Toxic: danger of serious damage to health by prolonged exposure through inhalation, in contact with skin and if swallowed		
48/23/25	Toxic: danger of serious damage to health by prolonged exposure through inhalation and if swallowed		
48/24	Toxic: danger of serious damage to health by prolonged exposure in contact with skin		
48/24/25	Toxic: danger of serious damage to health by prolonged exposure in contact with skin and if swallowed		
48/25	Toxic: danger of serious damage to health by prolonged exposure if swallowed		
50/53	Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment		

Safety phrases

Indication of safety precautions	
1 Keep locked up	30 Never add water to this product
(2) Keep out of the reach of children	33 Take precautionary measures against static discharges
3 Keep in a cool place	35 This material and its container must be disposed of in a safe way
4 Keep away from living quarters	36 Wear suitable protective clothing
5 Keep contents under ... (appropriate liquid to be specified by the manufacturer)	37 Wear suitable gloves
6 Keep under ... (inert gas to be specified by the manufacturer)	38 In case of insufficient ventilation wear suitable respiratory equipment
7 Keep container tightly closed	39 Wear eye/face protection
8 Keep container dry	40 To clean the floor and all objects contaminated by this material use ... (to be specified by the manufacturer)
9 Keep container in a well-ventilated place	41 In case of fire and/or explosion do not breathe fumes
12 Do not keep the container sealed	42 During fumigation/spraying wear suitable respiratory equipment (appropriate wording to be specified by the manufacturer)
13 Keep away from food, drink and animal feeding stuffs	43 In case of fire, use ... (indicate in the space the precise type of fire fighting equipment. If water increases the risk add - Never use water)
14 Keep away from ... (incompatible materials to be indicated by the manufacturer)	45 In case of accident or if you feel unwell seek medical advice immediately (show the label where possible)
15 Keep away from heat	46 If swallowed, seek medical advice immediately and show this container or label
16 Keep away from sources of ignition - No smoking	47 Keep at temperature not exceeding ... °C (to be specified by the manufacturer)
17 Keep away from combustible material	48 Keep wetted with ... (appropriate material to be specified by the manufacturer)
18 Handle and open container with care	49 Keep only in the original container
20 When using do not eat or drink	50 Do not mix with ... (to be specified by the manufacturer)
21 When using do not smoke	51 Use only in well ventilated areas
22 Do not breathe dust	52 Not recommended for interior use on large surface areas
23 Do not breathe gas/fumes/vapour/spray (appropriate wording to be specified by the manufacturer)	53 Avoid exposure - Obtain special instructions before use
24 Avoid contact with skin	56 Dispose of this material and its container to hazardous or special waste collection point
25 Avoid contact with eyes	57 Use appropriate containment to avoid environmental contamination
26 In case of contact with eyes, rinse immediately with plenty of water and seek medical advice	59 Refer to manufacturer/supplier for information on recovery/recycling
27 Take off immediately all contaminated clothing	
28 After contact with skin, wash immediately with plenty of ... (to be specified by the manufacturer)	
29 Do not empty into drains	

60	This material and its container must be disposed of as hazardous waste	29/56	Do not empty into drains, dispose of this material and its container to hazardous or special waste collection point
61	Avoid release to the environment. Refer to special instructions/safety data sheet	36/37	Wear suitable protective clothing and gloves
62	If swallowed, do not induce vomiting: seek medical advice immediately and show this container or label	36/37/39	Wear suitable protective clothing, gloves and eye/face protection
63	In case of accident by inhalation: remove casualty to fresh air and keep at rest	36/39	Wear suitable protective clothing and eye/face protection
64	If swallowed, rinse mouth with water (only if the person is conscious)	37/39	Wear suitable gloves and eye/face protection
Combination of safety precautions		47/49	Keep only in the original container at a temperature not exceeding ... °C (to be specified by manufacturer)
(1/2)	Keep locked up and out of the reach of children		
3/7	Keep container tightly closed in a cool place		
3/7/9	Keep container tightly closed in a cool, well ventilated place		
3/9/14	Keep in a cool, well ventilated place away from ... (incompatible materials to be indicated by the manufacturer)		
3/9/14/49	Keep only in the original container in a cool, well ventilated place away from (incompatible materials to be indicated by the manufacturer)		
3/9/49	Keep only in the original container in a cool, well ventilated place		
3/14	Keep in a cool place away from ... (incompatible materials to be indicated by manufacturer)		
7/8	Keep container tightly closed and dry		
7/9	Keep container tightly closed and in a well ventilated place		
7/47	Keep container tightly closed and at a temperature not exceeding ... °C (to be specified by manufacturer)		
20/21	When using do not eat, drink or smoke		
24/25	Avoid contact with skin and eyes		
27/28	After contact with skin, take off immediately all contaminated clothing, and wash immediately with plenty of ... (to be specified by the manufacturer)		
29/35	Do not empty into drains; dispose of this material and its container in a safe way		

Hazard symbols

	category of danger	symbol letter	indication of danger	symbol orange background
Physico-chemical	explosive	E	explosive	
	oxidising	O	oxidising	
	extremely flammable	F+	extremely flammable	
	highly flammable	F	highly flammable	
	flammable	-	-	-
Health	very toxic	T+	very toxic	
	toxic	T	toxic	
	harmful	Xn	harmful	
	corrosive	C	corrosive	
	irritant	Xi	irritant	
	sensitising	Xn	harmful	
		Xi	irritant	
	Carcinogenic	T	toxic	
	category 3	Xn	harmful	
	Mutagenic	T	toxic	
	category 3	Xn	harmful	
Toxic for reproduction	categories 1 and 2	T	toxic	
	category 3	Xn	harmful	
Environmental	dangerous for the environment	N	dangerous for the environment	

Notes

Lettered notes

The notes which appear after (or in some cases just below) the first name of the substance are very important. The significance of the notes is as follows.

Note A

The name of the substance should appear on the label in the form of one of the designations given in Parts I or III.

In Parts I or III, use is sometimes made of a general designation such as: '... compounds' or '... salts'. In this case, the manufacturer or any other person who markets such a substance should state on the label the correct name, due account being taken of the general advice in the introduction.

example for BeC12 : beryllium chloride

Note B

Some substances (acids, bases, etc.) are placed on the market in aqueous solutions at various concentrations and therefore require different labelling since the hazards vary. For aqueous solutions the label shown in Part I is for the highest concentration range given under the concentration limits. For lower concentration ranges, safety phrases should be selected according to the normal rules for preparations.

In Parts I and III, a general designation of the following type is used; %

example '... % nitric acid'

In this case the manufacturer or any other person who markets such a substance should give on the label the percentage concentration of the solution.

example 45% nitric acid

Unless otherwise stated, it is assumed that the percentage concentration is calculated on a weight/weight (w/w) basis.

The use of other data (eg specific gravity, degrees Baumé) or descriptive phrases (eg fuming or glacial) is permissible.

Note C

Some organic substances may be marketed either in a specific isomeric form or as a mixture of several isomers. In Parts I or III, a general designation of the following type is sometimes used:

example 'xylenol'

In this case the manufacturer or any other person who markets such a substance should state on the label whether the substance is a specific isomer (a) or a mixture of isomers (b).

examples (a) 2,4-dimethylphenol
(b) xylene (mixture of isomers)

(See also paragraphs 10 and 13).

Note D

Certain substances which are susceptible to spontaneous polymerisation or decomposition are generally placed on the market in a stabilised form. This is the form that is listed in Parts I and III.

However, such substances are sometimes placed on the market in a non-stabilised form. In this case, the manufacturer or any person who places such a substance on the market should state on the label the name of the substance followed by the words 'non-stabilised'.

example methacrylic acid (non-stabilised)

Note E

For substances ascribed Note E the risk phrases R20, R21, R22, R23, R24, R25, R26, R27, R28, R39, R68 (harmful) and R65 and all combinations of these risk phrases should be preceded by the word 'also'.

examples R45, 23: 'May cause cancer. Also toxic by inhalation'
R46, 27/28: 'May cause heritable genetic damage
Also very toxic in contact with skin and if swallowed'

Note F

This substance may contain a stabiliser. If the stabiliser changes the dangerous properties of the substance, as indicated by the label in Part I, a label should be provided in accordance with the rules for the labelling of dangerous preparations.

Note G

This substance may be marketed in an explosive form in which case it should be evaluated using the appropriate test methods and a label should be provided reflecting its explosive property.

Note H

The classification and label shown for this substance applies only to the dangerous propert(ies) indicated by the risk phrase(s) in combination with the categor(ies) of danger shown. The requirements of regulation 4 of CHIP, on manufacturers, distributors and importers of this substance apply to all other aspects of classification and labelling. The final label shall follow the requirements of the Approved guide to the classification and labelling of substances and preparations dangerous for supply. This note applies only to certain coal- and oil-derived complex substances.

NB The following notes J, K, L, M and P are also relevant to preparations (see paragraphs 29 and 30).

Note J

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 0.1% w/w benzene (EINECS no 200-753-7). This note only applies to certain complex coal- and oil-derived substances,

Note K

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 0.1% w/w 1,3 butadiene (EINECS no 203-450-8). If the substance is not classified as a carcinogen, at least the S-phrases (2), 9,16 should apply. This note only applies to certain complex oil-derived substances.

Note L

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 3% DMSO extract as measured by IP 346. This note only applies to certain complex oil-derived substances.

Note M

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 0.005% w/w benzo[a]pyrene (EINECS no 200-028-5). This note only applies to certain complex coal-derived substances.

Note N

The classification as a carcinogen need not apply if the full refining history is known and it can be shown that the substance from which it is produced is not a carcinogen. This note only applies to certain complex oil-derived substances.

Note P

The classification as a carcinogen need not apply if it can be shown that the substance contains less than 0.1% w/w benzene (EINECS no 200-753-7).

When the substance is classified as a carcinogen Note E shall also apply.

When the substance is not classified as a carcinogen at least the S-phrases (2), 23, 24, 62 shall apply. This note only applies to certain complex oil-derived substances.

Note Q

The classification as a carcinogen need not apply if it can be shown that the substance fulfils one of the following conditions:

- a short-term biopersistence test by inhalation has shown that the fibres longer than 20 µm have a weighted half life of less than 10 days, or
- a short-term biopersistence test by intratracheal instillation has shown that the fibres longer than 20 µm have a weighted half life less than 40 days, or
- an appropriate intra-peritoneal test has shown no evidence of excess carcinogenicity, or
- absence of relevant pathogenicity or neoplastic changes in a suitable long term inhalation test.

Note R

The classification as a carcinogen need not apply to fibres with a length weighted geometric mean diameter less two standard geometric errors greater than 6 µm.

Note S

This substance may not require a label according to regulation 9 of CHIP (see the section entitled 'Special cases' in the Approved guide to the classification and labelling of substances and preparations dangerous for supply)

Labelling of preparations

The significance of the notes that appear above the concentration limits for each entry in Part I is as follows.

Note 1

The concentration stated is the percentage by weight of the metallic element calculated with reference to the total weight of the preparation.

Note2

The given concentration of isocyanate is the percentage by weight of the free monomer calculated with reference to the total weight of the preparation.

Note 3

The concentration stated is the percentage by weight of chromate ions dissolved in water calculated with reference to the total weight of the preparation.

Note 4

Preparations containing these substances have to be classified as harmful with R65 if they meet the criteria in the Approved guide to the classification and labelling of substances and preparations dangerous for supply.

Note 5

The concentration limits for gaseous preparations are expressed as volume per volume percentage.
